Montgomery, 2012-10-23 Design and Analysis of Experiments 8th Edition with Student Solutions Manual and Design Expert 8.0.7 Set Douglas C. Montgomery, 2012-10-23 *Design and Analysis of Experiments, Student Solutions Manual* Douglas C. Montgomery, 2005-07-29 Now in its 6th edition this bestselling professional reference has helped over 100 000 engineers and scientists with the success of their experiments Douglas Montgomery arms readers with the most effective approach for learning how to design conduct and analyze experiments that optimize performance in products and processes He shows how to use statistically designed experiments to obtain information for characterization and optimization of systems improve manufacturing processes and design and develop new processes and products You will also learn how to evaluate material alternatives in product design improve the field performance reliability and manufacturing aspects of products and conduct experiments effectively and efficiently Discover how to improve the quality and efficiency of working systems with this highly acclaimed book This 6th Edition Places a strong focus on the use of the computer providing output from two software products Minitab and DesignExpert Presents timely new examples as well as expanded coverage on adding runs to a fractional factorial to de alias effects Includes detailed discussions on how computers are currently used in the analysis and design of experiments Offers new material on a number of important topics including follow up experimentation and split plot design Focuses even more sharply on factorial and fractional factorial design **Optimization of adaptive test design methods for the determination of steady-state data-driven models in terms of combustion engine calibration** Sandmeier, Nino, 2022-12-01 This thesis deals with the development of a model based adaptive test design strategy with a focus on steady state combustion engine calibration The first research topic investigates the question how to handle limits in the input domain during an adaptive test design procedure The second area of scope aims at identifying the test design method providing the best model quality improvement

in terms of overall model prediction error To consider restricted areas in the input domain a convex hull based solution involving a convex cone algorithm is developed the outcome of which serves as a boundary model for a test point search A solution is derived to enable the application of the boundary model to high dimensional problems without calculating the exact convex hull and cones Furthermore different data driven engine modeling methods are compared resulting in the Gaussian process model as the most suitable one for a model based calibration To determine an appropriate test design method for a Gaussian process model application two new strategies are developed and compared to state of the art methods A simulation based study shows the most benefit applying a modified mutual information test design followed by a newly developed relevance based test design with less computational effort The boundary model and the relevance based test design are integrated into a multicriterial test design strategy that is tailored to match the requirements of combustion engine test bench measurements A simulation based study with seven and nine input parameters and four outputs each offered an average model quality improvement of 36 % and an average measured input area volume increase of 65 % compared to a non adaptive space filling test design The multicriterial test design was applied to a test bench measurement with seven inputs for verification Compared to a space filling test design measurement the improvement could be confirmed with an average model quality increase of 17 % over eight outputs and a 34 % larger measured input area Diese Arbeit befasst sich mit der Entwicklung einer modellbasierten adaptiven Versuchsplanungsstrategie für die Anwendung in der Applikation des Stationärverhaltens von Verbrennungsmotoren Der erste Forschungsteil untersucht wie sich Grenzen im Eingangsraum in die Versuchsplanung eines adaptiven Prozesses einbinden lassen Ein weiterer Fokus liegt auf der Identifikation einer modellbasierten Versuchsplanung die eine bestmögliche Verbesserung der globalen Modellqualität hinsichtlich des Prädiktionsfehlers ermöglicht Es wird ein Grenzraummodell auf Basis der konvexen Hülle unter Zuhilfenahme eines Algorithmus zur Bestimmung eines konvexen Konus entwickelt das als Grundlage für eine Versuchsplanung in beschränkten Eingangsräumen verwendet wird Um die Anwendbarkeit bei hochdimensionalen Problemstellungen zu gewährleisten wird ein Verfahren vorgestellt das eine Berechnung auch ohne die Bestimmung der exakten konvexen Hülle und konvexen Konen ermöglicht Des Weiteren werden verschiedene Methoden zur datengetriebenen Modellbildung des Verbrennungsmotors verglichen wobei das Gau Prozess Modell als die geeignetste Modellierungsmethode hervorgeht Um die bestmögliche Versuchsplanungsmethode bei der Anwendung des Gau Prozess Modells zu ermitteln werden zwei neue Strategien entwickelt und mit verfügbaren Methoden aus der Literatur verglichen Eine simulationsbasierte Studie zeigt dass eine angepasste Mutual Information Methode die besten Ergebnisse liefert Ein neu entwickeltes relevanzbasiertes Verfahren erreicht die zweitbesten Ergebnisse bietet aber einen geringeren Berechnungsaufwand als das Mutual Information Verfahren Das Grenzmodell und das relevanzbasierte Verfahren werden in einem multikriteriellen Versuchsplanungsverfahren zusammengeführt das an die Anforderungen von Messungen an einem Verbrennungsmotorenprüfstand angepasst ist In einer

simulationsbasierten Studie mit sieben bzw neun Eingangsparametern und jeweils vier Ausg ngen konnte eine durchschnittliche Modellqualit tsverbesserung von 36 % und eine mittlere Vergr erung des vermessenen Eingangsraumvolumens von 65 % im Vergleich zu einer nichtadaptiven raumf llenden Versuchsplanung gezeigt werden Das multikriterielle Versuchsplanungsverfahren wurde anhand von Pr fstandsmessungen mit sieben Eingangsparametern verifiziert Im Vergleich zu einer raumf llenden Versuchsplanung konnte eine mittlere Modellqualit tsverbesserung ber alle acht Ausg nge von 17 % und ein um 34 % vergr ertes vermessenenes Eingangsraumvolumen erreicht werden wodurch die Ergebnisse der Simulationen best tigt werden konnten
