Richard Jones, 2025-07-14 Now full disclosure: I'm not a statistician. I'm not even a failed statistician. I'm a data information and knowledge architect. Which lets me face it: it sounds like someone who builds libraries for robots. And in a way I do. Except the robots are middle managers and the libraries are databases full of regrets and bad formatting. But I respect statisticians. I admire them. They are the quiet librarians of empirical truth, toiling away with n values and confidence intervals while the rest of the world's busy building AI models that can't even tell the difference between a cat and a war crime. And so I wrote this to say: statisticians matter. Analysts matter. Truth matters. And if they can't or won't say it themselves because they're too busy validating regressions or crying into their R scripts, then I'll do it. I'll defend them whether they like it or not. It's my form of vigilante justice like Batman but with pivot tables. Yes, this book is multi-modal and multi-model. No, it won't give you all the answers. But it will ask better questions than: How do we maximise synergy in the Q4 vertical? So here it is. A book that tries against all odds against the tide of meaningless metrics and digital chicanery to make analytics useful, accessible and just the tiniest bit decent. Because in a world where the truth has to compete with corporate nonsense dressed as insight, someone has to stick up for the bar charts that mean something. Let's make analytics great again. Or at least not completely unbearable. Enjoy **Glocalized Solutions for Sustainability in Manufacturing** Jürgen Hesselbach, Christoph Herrmann, 2011-03-19

The 18th CIRP International Conference on Life Cycle Engineering LCE 2011 continues a long tradition of scientific meetings

focusing on the exchange of industrial and academic knowledge and experiences in life cycle assessment product development sustainable manufacturing and end of life management The theme Glocalized Solutions for Sustainability in Manufacturing addresses the need for engineers to develop solutions which have the potential to address global challenges by providing products services and processes taking into account local capabilities and constraints to achieve an economically socially and environmentally sustainable society in a global perspective Glocalized Solutions for Sustainability in Manufacturing do not only involve products or services that are changed for a local market by simple substitution or the omitting of functions Products and services need to be addressed that ensure a high standard of living everywhere Resources required for manufacturing and use of such products are limited and not evenly distributed in the world Locally available resources local capabilities as well as local constraints have to be drivers for product and process innovations with respect to the entire life cycle The 18th CIRP International Conference on Life Cycle Engineering LCE 2011 serves as a platform for the discussion of the resulting challenges and the collaborative development of new scientific ideas

Why Quality is Important and How It Applies in Diverse Business and Social Environments, Volume I Paul Hayes, 2020-12-24 These two volumes are about understanding why and application how with the aim of providing guidance and introduction to both Quality is the consistent achievement of the user's expectations of a product or service The achievement needs to be The right thing right first time every time in time Beginning with manufacturing and services it also includes professional personal and spiritual dimensions Variation does not sit happily with consistency and skill in handling risk and opportunity requires competence in the use of statistics probability and uncertainty and needs to complement the critically essential soft dimensions of quality and the overarching and underpinning primacy of personal relationships There are no clear boundaries to the applicability of quality and the related processes and procedures expressed in management systems and this is why it matters so much to show how it applies in diverse business and social environments Increasingly the acceptability of boundaries that are drawn depends on their effect on the user and the achievement of quality and the latest standards on quality management are explicit on this key point Quality is everyone's business and there is no single professional discipline that can properly express this Insights knowledge experience best practice tools and techniques need to be shared across all kinds of organizational and professional boundaries and there is no departmental boundary that can stand apart from the organization wide commitment to quality achievement

Global Sustainable Development and Renewable Energy Systems Olla, Phillip, 2012-05-31 Over the past decade the use of Renewable Energy Technology RET has significantly increased around the globe Technologies that once were considered experimental are now being deployed on commercial scales at phenomenal rates delivering cost effective substitutions for conventional fossil fuel based systems that cause problems including greenhouse gas emissions expensive operating costs and global pollution But these new systems come at a costly rate and because of this officials must review their overall efficiency and effectiveness Global Sustainable Development and

Renewable Energy Systems pushes through the boundaries of current research to introduce the concept of an energy management information system exploring the role of energy for sustainable development This book goes into great detail describing the benefits of these systems for organizations focusing on corporate sustainability initiatives and activities to combat climate change Research presented in this publication includes modeling techniques software applications and case studies that reveal how renewable energy sources such as wind solar and biomass fuel can have a significant implications for both operating costs and environmental impacts

The Magic Ring Piero Mella, 2021-04-01 This book presents a new understanding on how control systems truly operate and explains how to recognize simulate and improve control systems in all fields of activity It also reveals the pervasive ubiquitous and indispensable role of control processes in our life and the need to develop a control oriented thinking based on uncomplicated but effective models derived from systems thinking that is a true discipline of control Over the book's thirteen chapters Piero Mella shows that there are simple control systems rather than complex ones that can easily help us to manage complexity without drawing upon more sophisticated control systems It begins by reviewing the basic language of systems thinking and the models it allows users to create It then introduces the control process presenting the theoretical structure of three simple control systems we all can observe in order to gain fundamental knowledge from them about the basic structure of a control system Then it presents the anatomy of the simplest magic ring and the general theoretical model of any control system This is followed by an introduction to a general typology of control systems and a broader view of control systems by investigating multi lever control systems and multi objective systems The book undertakes the concepts through various environments increasingly broader in scope to suggest to readers how to recognize therein control systems manifestations in everyday life and in natural phenomena Updated for the 2nd edition new chapters explore control systems regulating the biological environment and the organizations with an in depth study of the control of quality productivity production stocks and costs Finally it concludes by dealing with the learning process problem solving and designing the logical structure of control systems
