

The series of Designers' Guide to the Eurocodes provides comprehensive guidance in the form of design aids, indications for the most convenient design procedures and worked examples. The books also include background information to assist the designer in understanding the reasoning behind and the objectives of the codes. All of the individual guides work in conjunction with the Designer's Guide to EN1990 Eurocode: Basis of Structural Design.

The principal aim of this guide is to provide the user with guidance on the interpretation and use of the 'load' code for wind actions on structures – EN1991-1-4, Eurocode 1: Actions on structures. General actions Part 1-4: Wind actions, and all the examples that are expected to be introduced by the associated National Annexes.

Because the structure and format of EN1991-1-4 is extremely complicated it is very difficult to apply this a particular design without a strong likelihood of error. Many of the recommended implementation rules are very complex and, where simplifications have been attempted, the resulting loss of accuracy outweighs any benefit. This guide explains the principal and implementation rules of the Eurocode, identifies key details and provides robust and helpful advice for the user.

Chapters 1 to 8 of this guide correspond to the eight sections of EN1991-1-4 and the numbering sequence of these chapters mirrors the clause numbers of the EN, while chapter 9 corresponds to the six annexes. In addition, the relevant clause numbers of EN1991-1-4 and of the UK National Annex appear in the margins against the corresponding commentary.

This guide is essential reading for:

- civil and structural engineers
- code-drafting committees
- clients
- students of structural design
- public authorities
- researchers
- trainers

In fact, everyone who will be affected by the Eurocodes.
