Since its first appearance in 1950 Pounder's Marine Diesel Engines has served seagoing engineers students of the Certificates of Competency examinations and the marine engineering industry throughout the world Each new edition has noted the changes in engine design and the influence of new technology and economic needs on the marine diesel engine This new edition has been completely re written and re structured while retaining the directness of approach and attention to essential detail that characterised its predecessors There are new sections covering principles and theory and engine selection and important developments such as the use of high speed diesel engines for instance in fast ferry craft are treated in full In addition numerous illustrations of all the listed types of engines appear in their relevant chapters      *Crown's Diesel Repair Manual* Morton J. popular typologies of fuel injection systems are considered with special focus on state of the art solutions Dedicated sections on the methods for air mass evaluation fuel delivery low pressure modules and the specific subsystems for idle cold start and warm up control are also included The authors pay special attention to mixture formation strategies as they are a fundamental theme for SI engines An exhaustive overview of fuel injection technologies is provided and mixture formation strategies for spark ignited combustion engines are considered Fuel Injection Systems illustrates the performance of these systems and will also serve as a reference for engineers who are active in the aftermarket offering detailed information on fuel injection system solutions that are mounted in older vehicles **Transactions** Institute of Marine Engineers,1961
