Systems Radek Silhavy, Petr Silhavy, Zdenka Prokopova, 2020-12-15 This book constitutes the refereed proceedings of the 4th Computational Methods in Systems and Software 2020 CoMeSySo 2020 proceedings Software engineering computer science and artificial intelligence are crucial topics for the research within an intelligent systems problem domain The CoMeSySo 2020 conference is breaking the barriers being held online CoMeSySo 2020 intends to provide an international forum for the discussion of the latest high quality research results

Field Programmable Logic and Applications

Patrick Lysaght, James Irvine, Reiner Hartenstein, 2004-06-22 This book contains the papers presented at the 9th International Workshop on Field Programmable Logic and Applications FPL 99 hosted by the University of Strathclyde in Glasgow Scotland August 30 September 1 1999 FPL 99 is the ninth in the series of annual FPL workshops The FPL 99 programme committee has been fortunate to have received a large number of high quality papers addressing a wide range of topics From these 33 papers have been selected for presentation at the workshop and a further 32 papers have been accepted for the poster

sessions A total of 65 papers from 20 countries are included in this volume FPL is a subject area that attracts researchers from both electronic engineering and computer science Whether we are engaged in research into software or hardware seems to be primarily a question of perspective What is unquestionable is that the interaction of groups of researchers from different backgrounds results in stimulating and productive research As we prepare for the new millennium the premier European forum for researchers in embedded programmable logic remains the FPL workshop Next year the FPL series of workshops will celebrate its tenth anniversary The contribution of so many overseas researchers has been a particularly attractive feature of these events giving them a truly international perspective while the informal and convivial atmosphere that pervades the workshops have been their hallmark We look forward to preserving these features in the future while continuing to expand the size and quality of the events

Crosstalk in Modern On-Chip Interconnects B.K. Kaushik, V. Ramesh Kumar, Amalendu Patnaik, 2016-04-06 The book provides accurate FDTD models for on chip interconnects covering most recent advancements in materials and design Furthermore depending on the geometry and physical configurations different electrical equivalent models for CNT and GNR based interconnects are presented Based on the electrical equivalent models the performance comparison among the Cu CNT and GNR based interconnects are also discussed in the book The proposed models are validated with the HSPICE simulations The book introduces the current research scenario in the modeling of on chip interconnects It presents the structure properties and characteristics of graphene based on chip interconnects and the FDTD modeling of Cu based on chip interconnects The model considers the non linear effects of CMOS driver as well as the transmission line effects of interconnect line that includes coupling capacitance and mutual inductance effects In a more realistic manner the proposed model includes the effect of width dependent MFP of the MLGNR while taking into account the edge roughness

Power Aware Computing Robert Graybill, Rami Melhem, 2013-04-17 With the advent of portable and autonomous computing systems power consumption has emerged as a focal point in many research projects commercial systems and DoD platforms One current research initiative which drew much attention to this area is the Power Aware Computing and Communications PAC C program sponsored by DARPA Many of the chapters in this book include results from work that have been supported by the PACIC program The performance of computer systems has been

tremendously improving while the size and weight of such systems has been constantly shrinking The capacities of batteries relative to their sizes and weights has been also improving but at a rate which is much slower than the rate of improvement in computer performance and the rate of shrinking in computer sizes The relation between the power consumption of a computer system and its performance and size is a complex one which is very much dependent on the specific system and the technology used to build that system We do not need a complex argument however to be convinced that energy and power which is the rate of energy consumption are becoming critical components in computer systems in general and portable and autonomous systems in particular Most of the early research on power consumption in computer systems addressed the issue of minimizing power in a given platform which usually translates into minimizing energy consumption and thus longer battery life

Low Voltage, Low Power VLSI Subsystems Kiat Seng Yeo, Kaushik Roy, 2005 Designers developing the low voltage low power chips that enable small portable devices face a very particular set of challenges This monograph details design techniques for the low power circuitry required by the many miniaturized business and consumer products driving the electronics market

ZnO Thin-Film Transistors for Cost-Efficient Flexible Electronics Fábio Fedrizzi Vidor, Gilson Inácio Wirth, Ulrich Hilleringmann, 2017-12-28 This book describes the integration characterization and analysis of cost efficient thin film transistors TFTs applying zinc oxide as active semiconductors The authors discuss soluble gate dielectrics ZnO precursors and dispersions containing nanostructures of the material while different transistor configurations are analyzed with respect to their integration compatibility and device performance Additionally simple circuits inverters and ring oscillators and a complementary design employing inorganic semiconducting materials are presented and discussed Readers will benefit from concise information on cost efficient materials and processes applied in flexible and transparent electronic technology such as the use of solution based materials and dispersion containing nanostructures as well as discussion of the physical fundamentals responsible for the operation of the thin film transistors and the non idealities of the device
