States depend on its capacity to innovate Major sources of innovative capacity are the new knowledge and trained students generated by U S research universities However many of the complex technical and societal problems the United States faces cannot be addressed by the traditional model of individual university research groups headed by a single principal investigator Instead they can only be solved if researchers from multiple institutions and with diverse expertise combine their efforts The National Science Foundation NSF among other federal agencies began to explore the potential of such center scale research programs in the 1970s and 1980s in many ways the NSF Engineering Research Center ERC program is its flagship program in this regard The ERCs are interdisciplinary multi institutional centers that join academia industry and government in partnership to produce transformational engineered systems and engineering graduates who are adept at innovation and primed for leadership in the global economy To ensure that the ERCs continue to be a source of innovation economic development and educational excellence A New Vision for Center Based Engineering Research explores the future of center based engineering research the skills needed for effective center leadership and opportunities to enhance engineering education through the centers Advanced Manufacturing William B. How to rethink innovation and revitalize America s declining manufacturing sector by encouraging advanced manufacturing bringing innovative technologies into the production process The United States lost almost one third of its manufacturing jobs between 2000 and 2010 As higher paying manufacturing jobs are replaced by lower paying service jobs income inequality has been approaching third world levels In particular between 1990 and 2013 the median income of men without high school diplomas fell by an astonishing 20% between 1990 and 2013 and that of men with high school diplomas or some college fell by a painful 13% Innovation has been left largely to software and IT startups and increasingly U S firms operate on a system of innovate here produce there leaving the manufacturing sector behind In this book William Bonvillian and Peter Singer explore how to rethink innovation and revitalize America s declining manufacturing sector They argue that advanced manufacturing which employs such innovative technologies as 3 D printing advanced material photonics and robotics in the production process is the key Bonvillian and Singer discuss transformative new production paradigms that could drive up efficiency and drive down costs describe the new processes and business models that must accompany them and explore alternative funding methods for startups that must manufacture They examine the varied attitudes of mainstream economics toward manufacturing the post Great Recession policy focus on advanced manufacturing and lessons from the new advanced manufacturing institutes They consider the problem of startup scaleup possible new models for training workers and the role of manufacturing in addressing secular stagnation in innovation growth the middle classes productivity rates and related investment As recent political turmoil shows the stakes could not be higher **The Next Production Revolution Implications for Governments and Business** OECD, 2017-05-10 This publication examines the opportunities and challenges for business and government associated with technologies bringing about the next production
