Screening Angela Dean, Susan Lewis, 2006-07-28 The process of discovery in science and technology may require investigation of a large number of features such as factors genes or molecules In Screening statistically designed experiments and analyses of the resulting data sets are used to identify efficiently the few features that determine key properties of the system under study This book brings together accounts by leading international experts that are essential reading for those working in fields such as industrial quality improvement engineering research and development genetic and medical screening drug discovery and computer simulation of manufacturing systems or economic models Our aim is to promote cross fertilization of ideas and methods through detailed explanations a variety of

examples and extensive references Topics cover both physical and computer simulated experiments They include screening methods for detecting factors that affect the value of a response or its variability and for choosing between various different response models Screening for disease in blood samples for genes linked to a disease and for new compounds in the search for effective drugs are also described Statistical techniques include Bayesian and frequentist methods of data analysis algorithmic methods for both the design and analysis of experiments and the construction of fractional factorial designs and orthogonal arrays The material is accessible to graduate and research statisticians and to engineers and chemists with a working knowledge of statistical ideas and techniques It will be of interest to practitioners and researchers who wish to learn about useful methodologies from within their own area as well as methodologies that can be translated from one area to another

Design of Experiment Bradley Jones, Douglas C. Montgomery, 2019-11 There are several textbooks covering material in design of experiments DOE It is a fair question then to ask Why write another DOE textbook One answer is based on the observation that in 2018 over a quarter of the DOE courses taught at the university level rely on course notes rather than a text We view this as an evidence of pent up demand for a different kind of textbook than is currently available A characteristic of many DOE textbooks is that they focus as much or more on analysis than on design A student might get the impression that there is only one appropriate design for any scenario and this design should be orthogonal Orthogonal designs have the desirable feature that the analysis of the data generated after running the experiment is less demanding than the analysis of observational data

Accompany's 9780470128664 **Design of Experiments** Bradley Jones, Douglas C. Montgomery, 2019-12-12 Design of Experiments: A Modern Approach introduces readers to planning and conducting experiments, analyzing the resulting data, and obtaining valid and objective conclusions. This innovative textbook uses design optimization as its design construction approach, focusing on practical experiments in engineering, science, and business rather than orthogonal designs and extensive analysis. Requiring only first course knowledge of statistics and familiarity with matrix algebra, student-friendly chapters cover the design process for a range of various types of experiments. The text follows a traditional outline for a design of experiments course, beginning with an introduction to the topic, historical notes, a review of fundamental statistics concepts, and a systematic process for designing and conducting experiments. Subsequent chapters cover simple comparative experiments, variance analysis, two-factor factorial experiments, randomized complete block design, response surface methodology, designs for nonlinear models, and more. Readers gain a solid understanding of the role of experimentation in technology commercialization and product realization activities, including new product design, manufacturing process development, and process improvement, as well as many applications of designed experiments in other areas such as marketing, service operations, e-commerce, and general business operations.
