On-Chip Communication Architectures Sudeep Pasricha, Nikil Dutt, 2010-07-28 Over the past decade system on chip SoC designs have evolved to address the ever increasing complexity of applications fueled by the era of digital convergence Improvements in process technology have effectively shrunk board level components so they can be integrated on a single chip New on chip communication architectures have been designed to support all inter component communication in a SoC design These communication architecture fabrics have a critical impact on the power consumption performance cost and design cycle time of modern SoC designs As application complexity strains the communication backbone of SoC designs academic and industrial R D efforts and dollars are increasingly focused on communication architecture design On Chip Communication Architectures is a comprehensive reference on concepts research and trends in on chip communication architecture design It will provide readers with a comprehensive survey not available elsewhere of all current standards for on chip communication architectures A definitive guide to on chip communication

architectures explaining key concepts surveying research efforts and predicting future trends Detailed analysis of all popular standards for on chip communication architectures Comprehensive survey of all research on communication architectures covering a wide range of topics relevant to this area spanning the past several years and up to date with the most current research efforts Future trends that will have a significant impact on research and design of communication architectures over the next several years

Communication Architectures for Systems-on-Chip José L. Ayala, 2018-09-03 A presentation of state of the art approaches from an industrial applications perspective Communication Architectures for Systems on Chip shows professionals researchers and students how to attack the problem of data communication in the manufacture of SoC architectures With its lucid illustration of current trends and research improving the performance quality and reliability of transactions this is an essential reference for anyone dealing with communication mechanisms for embedded systems systems on chip and multiprocessor architectures or trying to overcome existing limitations Exploring architectures currently implemented in manufactured SoCs and those being proposed this book analyzes a wide range of applications including Well established communication buses Less common networks on chip Modern technologies that include the use of carbon nanotubes CNTs Optical links used to speed up data transfer and boost both security and quality of service QoS The book's contributors pay special attention to newer problems including how to protect transactions of critical on chip information personal data security keys etc from an external attack They examine mechanisms revise communication protocols involved and analyze overall impact on system performance

Design and Verification of Bus Bridge from Ocp to AHB Ranganathan Sundaram, 2012 Protocols are commonly used to connect IP blocks on structured SoCs Generally Protocol is the back bone of the SoC and its failure usually leads to a non functional chip In present market various types of standard protocols are available and are used in SoC which requires a bridge to pass the information from one type of protocol to other type of protocol safely and without any data loss OCP and AMBA AHB protocol are commonly used protocols In this work the bus bridge has been designed to interface these protocols which plays a vital role in SoC application such as it may lead to application failure if it doesn't work properly Initially OCP and AHB protocols are modeled separately using VHDL and are simulated Basically Bus Bridge should convert command and data of OCP formats to acceptable AHB formats This conversion does not ensure proper communication unless the timings of each protocol were met Hence the interconnecting Bus Bridge wrapper between Core Centric Protocol OCP and Bus Centric Protocol AHB was designed with proper timing delay Also the PSL assertions are written in order to verify the behavior of protocols

Design Verification and Performance Analysis of Serial AXI Links in Broadcom System-on-Chip Simran Kaur Sarai, 2014 Design verification is an essential step in the development of any product Also referred to as qualification testing design verification ensures that the product as designed is the same as the product as intended In this project design verification and performance analysis of Thin Advanced Extensible Interface Links T AXI is conducted on a Broadcom's SoC System on Chip T AXI is a Broadcom's proprietary bus

that interfaces all the subsystems on the System onchip SoC to the system memory Test cases are developed to verify the functionality of the T AXI and performance verification is implemented using scenarios derived from real world examples A Field Programmable Gate Array FPGA is used to emulate the SoC design and C programming is used to write the test cases The test results verify the T AXI functionality and the performance analysis supports the theoretical calculations
