Designing The Interface 5th Edition:

Computer Organization and Design MIPS Edition David A. Patterson, John L. Hennessy, 2013-09-30 Computer Organization and Design Fifth Edition is the latest update to the classic introduction to computer organization. The text now contains new examples and material highlighting the emergence of mobile computing and the cloud. It explores this generational change with updated content featuring tablet computers, cloud infrastructure, and the ARM mobile computing devices and x86 cloud computing architectures. The book uses a MIPS processor core to present the fundamentals of hardware technologies: assembly language, computer arithmetic, pipelining, memory hierarchies, and I/O. Because an understanding of modern hardware is essential to achieving good performance and energy efficiency, this edition adds a new concrete example, *Going Faster*, used throughout the text to demonstrate extremely effective optimization techniques. There is also a new discussion of the Eight Great Ideas of computer architecture. Parallelism is examined in depth with examples and content highlighting parallel hardware and software topics. The book features the Intel Core i7, ARM Cortex A8, and NVIDIA Fermi GPU as real-world examples along with a full set of updated and improved exercises. This new edition is an ideal resource for professional digital system designers, programmers, application developers, and system software developers. It will also be of interest to undergraduate students in Computer Science, Computer Engineering, and Electrical Engineering courses in Computer Organization, Computer Design, ranging from Sophomore required courses to Senior Electives. Winner of a 2014 Texty Award from the Text and Academic Authors Association. Includes new examples, exercises, and material highlighting the emergence of mobile computing and the cloud. Covers parallelism in depth with examples and content highlighting parallel hardware and software topics. Features the Intel Core i7, ARM Cortex A8, and NVIDIA Fermi GPU as real-world examples throughout the book. Adds a new concrete example, *Going Faster*, to demonstrate how understanding hardware can inspire software optimizations that improve performance by 200 times. Discusses and highlights the Eight Great Ideas of computer architecture: Performance via Parallelism, Performance via Pipelining, Performance via Prediction, Design for Moore's Law, Hierarchy of Memories, Abstraction to Simplify Design, Make the Common Case Fast, and Dependability via Redundancy. Includes a full set of updated and improved exercises.

Interaction Design Helen Sharp, Jennifer Preece, Yvonne Rogers, 2019-04-04 A new edition of the 1 text in the human computer Interaction field. Hugely popular with students and professionals alike, the Fifth Edition of *Interaction Design* is an ideal resource for learning the interdisciplinary skills needed for interaction design, human computer interaction, information design, web design, and ubiquitous computing. New to the fifth edition: a chapter on data at scale, which covers developments in the emerging fields of human data interaction and data analytics. Reading Writing Interfaces Lori Emerson, 2014-06-01 Lori Emerson examines how interfaces from today's multitouch devices to yesterday's desktops from typewriters to Emily Dickinson's self-bound fascicle volumes mediate between writer and text as well as between writer and reader Following the threads of experimental writing from the present into the past she shows how writers have long tested and transgressed technological boundaries Reading the means of production as well as the creative works they produce Emerson demonstrates that technologies are more than mere tools and that the interface is not a neutral border between writer and machine but is in fact a collaborative creative space Reading Writing Interfaces begins with digital literature's defiance of the alleged invisibility of ubiquitous computing and multitouch in the early twenty-first century and then looks back at the ideology of the user-friendly graphical user interface that emerged along with the Apple Macintosh computer of the 1980s She considers poetic experiments with and against the strictures of the typewriter in the 1960s and 1970s and takes a fresh look at Emily Dickinson's self-printing projects as a challenge to the coherence of the book Through archival research Emerson offers examples of how literary engagements with screen-based and print-based technologies have transformed reading and writing She reveals the ways in which writers from Emily Dickinson to Jason Nelson and Judd Morrissey work with and against media interfaces to undermine the assumed transparency of conventional literary practice
