

SOAP vs.

Made by combining fat and lye, both natural ingredients

Has been made and used for thousands of years

Does not need a preservative due to its pH level. Naturally kills bacteria.

Glycerin is a by-product of the soap making process. Soap is a surfactant. It may not be as sudsy as detergent, but still effectively cleans.

One end of the soap molecule attracts water, the other end attracts impurities. Best used with hot water.

Naturally biodegradable

DETERGENT

Synthetically made from petroleum-based products

Developed in WW1 in Germany due to a shortage of animal fats

Both a preservative and an antibacterial agent is added to be effective

Contains surfactants, foaming agents (sulfates), alcohols, and a fragrance to mask the scent. Can overly dry skin and strip skin of its natural oils.

Can clean better in cold water or hard water. Is typically better at removing heavy oils or grease.

Not biodegradable
