

Solutions for Do Carmo Differential Form and Application

Chapter. 1

1)

Sufficiency:

If φ is alternate, then for all $v \in \mathbb{R}^2$

$$\varphi(v, v) = -\varphi(v, v) = 0$$

Necessity:

If for $\varphi(v, v) = 0$ means, then for arbitrary $u, v \in \mathbb{R}^2$:

$$\begin{aligned}\varphi(u, v) + \varphi(v, u) &= \varphi(u + v, u + v) = 0 \\ \varphi(u, v) &= -\varphi(v, u)\end{aligned}$$

which means φ is alternate.

2)

Hint tells the solution

3)

Remark1: If $\varphi_1, \dots, \varphi_k$ are 1-forms, then the exterior product $\varphi_1 \wedge \dots \wedge \varphi_k$ agrees with the k -form previously defined by

$$\varphi_1 \wedge \dots \wedge \varphi_k(v_1, \dots, v_k) = \det(\varphi_i(v_j))$$

Proof:

we define a k -form as

$$\omega(v_1, \dots, v_k) = \sum_I a_I dx_I$$

by definition, for an 1-form φ_{k+1} we have

$$\omega \wedge \varphi_{k+1}(v_1, \dots, v_k, u) = \sum_{I \in \mathcal{I}_k} a_I(v_1, \dots, v_k) \delta_{uI}(u) dx_I \wedge dx_u$$

recall that

$$\omega = \varphi_1 \wedge \dots \wedge \varphi_k(v_1, \dots, v_k) = \det(\varphi_i(v_j))$$

so for the $k+1$ -form above we have

$$\omega \wedge \varphi_{k+1}(v_1, \dots, v_k, u) = \sum (-1)^s \det(\varphi_i(v_j)) \cdot (\delta_{uI}(u) dx_u)$$

where $s = 1$ or 2 according to whether permutation $I' := I + (u)$ is odd or even. Notice that element u is not in I , so that matrix $(\varphi_i(v_j))$ can be used to construct a new matrix M_u .

Nonlinear Diffusion Equations and Their Equilibrium States, 3 N.G Lloyd, M.G. Ni, L.A. Peletier, J. Serrin, 2012-12-06 Nonlinear diffusion equations have held a prominent place in the theory of partial differential equations both for the challenging and deep mathematical questions posed by such equations and the important role they play in many areas of science and technology Examples of current interest are biological and chemical pattern formation semiconductor design environmental problems such as solute transport in groundwater flow phase transitions and combustion theory Central to the theory is the equation $U_t = \Delta U + f(U)$ Here denotes the n dimensional Laplacian Δ and f are given functions and the solution is defined on some domain $\Omega \times [0, T]$ in space time Fundamental questions concern the existence uniqueness and regularity of solutions the existence of interfaces or free boundaries the question as to whether or not the solution can be continued for all time the asymptotic behavior both in time and space and the development of singularities for instance when the solution ceases to exist after finite time either through extinction or through blow up

Differential Geometry of Curves and Surfaces Manfredo P. do Carmo, 2016-12-14 One of the most widely used texts in its field this volume introduces the differential geometry of curves and surfaces in both local and global aspects The presentation departs from the traditional approach with its more extensive use of elementary linear algebra and its emphasis on basic geometrical facts rather than machinery or random details Many examples and exercises enhance the clear well written exposition along with hints and answers to some of the problems The treatment begins with a chapter on curves followed by explorations of regular surfaces the geometry of the Gauss map the intrinsic geometry of surfaces and global differential geometry Suitable for advanced undergraduates and graduate students of mathematics this text's prerequisites include an undergraduate course in linear algebra and some familiarity with the calculus of several variables For this second edition the author has corrected revised and updated the entire volume

Global Analysis of Minimal Surfaces Ulrich Dierkes,Stefan Hildebrandt,Anthony Tromba,2010-08-16 Many properties of minimal surfaces are of a global nature and this is already true for the results treated in the first two volumes of the treatise Part I of the present book can be viewed as an extension of these results For instance the first two chapters deal with existence regularity and uniqueness theorems for minimal surfaces with partially free boundaries Here one of the main features is the possibility of edge crawling along free parts of the boundary The third chapter deals with a priori estimates for minimal surfaces in higher dimensions and for minimizers of singular integrals related to the area functional In particular far reaching Bernstein theorems are derived The second part of the book contains what one might justly call a global theory of minimal surfaces as envisioned by Smale First the Douglas problem is treated anew by using Teichmüller theory Secondly various index theorems for minimal theorems are derived and their consequences for the space of solutions to Plateau's problem are discussed Finally a topological approach to minimal surfaces via Fredholm vector fields in the spirit of Smale is presented
