Air Pollution Calculations Daniel A. Vallero, 2023-09-17 *Air Pollution Calculations* Quantifying Pollutant Formation, Transport, Transformation, Fate and Risks. Second Edition enhances the systems science aspects of air pollution including transformation reactions in soil, water, sediment and biota that contribute to air pollution. This second edition will be an update based on research and actions taken since 2019 that affect air pollution calculations including new control technologies, emissions measurement and air quality modeling. Recent court cases, regulatory decisions and advances in technology are discussed and where necessary calculations have been revised to reflect these updates. Sections discuss pollutant characterization, pollutant transformation and environmental partitioning. Air partitioning, physical transport of air pollutants, air pollution biogeochemistry and thermal reactions are also thoroughly explored. The author then carefully examines air pollution risk calculations, control technologies and dispersion models. The text wraps with discussions of economics and project management, reliability and failure, and air pollution decision making. Provides real life current cases as examples of quantitation of emerging air pollution problems. Includes straightforward derivation of equations giving practitioners and instructors a direct link between first principles of science and applications of technologies. Presents example calculations that make scientific theory real for the student and practitioner.

Nonporous Inorganic Membranes Anthony F. Sammells, Michael V. Mundschau, 2006-12-13 This reference book addresses the evolution of materials for both oxygen and hydrogen transport membranes and offers strategies for their fabrication as well as their subsequent incorporation into catalytic membrane reactors. Other chapters deal with engineering design and scale up issues, strategies for preparation of supported thin film membranes or interfacial kinetic and mass transfer issues. A must for materials scientists, chemists, chemical engineers and electrochemists interested in advanced chemical processing.
