

Losas Unidireccionales

Las **Losas Unidireccionales** se comportan básicamente como vigas anchas, que se suelen diseñar tomando como referencia una franja de ancho unitario (un metro de ancho). Existen consideraciones adicionales que serán estudiadas en su momento.

Cuando las losas rectangulares se apoyan en dos extremos opuestos, y carecen de apoyo en los otros dos bordes restantes, trabajan y se diseñan como losas unidireccionales.

Cuando la losa rectangular se apoya en sus cuatro lados (sobre vigas o sobre muros), y la relación largo / ancho es mayor o igual a 2, la losa trabaja fundamentalmente en la dirección más corta, y se la suele diseñar unidireccionalmente, aunque se debe proveer un mínimo de armado en la dirección ortogonal (dirección larga), particularmente en la zona cercana a los apoyos, donde siempre se desarrollan momentos flectores negativos importantes (tracción en las fibras superiores). Los momentos positivos en la dirección larga son generalmente pequeños, pero también deben ser tomados en consideración.
