Blackwell Handbook of

Judgment and Decision Making Derek J. Koehler, Nigel Harvey, 2008-04-15 The Blackwell Handbook of Judgment and Decision Making is a state of the art overview of current topics and research in the study of how people make evaluations draw inferences and make decisions under conditions of uncertainty and conflict Contains contributions by experts from various disciplines that reflect current trends and controversies on judgment and decision making Provides a glimpse at the many approaches that have been taken in the study of judgment and decision making and portrays the major findings in the field Presents examinations of the broader roles of social emotional and cultural influences on decision making Explores applications of judgment and decision making research to important problems in a variety of professional contexts including finance accounting medicine public policy and the law

Multicriteria Decision Making Timothy Havranek, Doug MacNair, 2023-06-06 Public corporations and private businesses operate in an increasingly complex uncertain and interconnected world When evaluating investment decisions business managers can no longer base their decisions primarily on expected financial return They now must now consider a host of performance value measures i e criteria pertaining to issues such as environmental and social governance sustainability and stakeholder satisfaction In addition corporate managers must ensure that their investment decisions are aligned with the company s vision mission and values in order to maintain investor confidence and protect brand image Lastly to be truly successful business managers must assess the risks associated with each performance measure and manage their impacts during project implementation This book takes a pragmatic business and economics view towards evaluating competing investment alternatives and or capital project strategies It provides a practical step by step process using a structured decision analysis framework to evaluate understand quantify and measure project investment strategies in light of multiple stakeholder objectives and success criteria This process assists in helping stakeholders internal and external achieve a shared understanding of project issues and to facilitate convergence towards a mutually acceptable solution The approach considers available choices identified uncertainties constraints necessary tradeoffs and preferences so as to identify solutions that maximize overall benefits while minimizing overall costs and risk A real world case study is presented in the early chapters and the process steps are demonstrated through application to this case study Recent advances in technology allow for investment strategies to be evaluated against multiple criteria within one integrated platform This book guides the reader in performing multi criteria decision analysis including the use of Monte Carlo simulation within an MS Excel environment using native MS Excel and as well as add in programs such Palisades Decision Tools suite Example model structures screen shots formulas and output results are provided throughout the book using an illustrative case study

Structured Decision Making Robin Gregory, Lee Failing, Michael Harstone, Graham Long, Tim McDaniels, Dan Ohlson, 2012-03-19 This book outlines the creative process of making environmental management decisions using the approach called Structured Decision Making It is a short introductory guide to this popular form of decision making and is aimed at environmental managers and scientists This is a

distinctly pragmatic label given to ways for helping individuals and groups think through tough multidimensional choices characterized by uncertain science diverse stakeholders and difficult tradeoffs This is the everyday reality of environmental management yet many important decisions currently are made on an ad hoc basis that lacks a solid value based foundation ignores key information and results in selection of an inferior alternative Making progress in a way that is rigorous inclusive defensible and transparent requires combining analytical methods drawn from the decision sciences and applied ecology with deliberative insights from cognitive psychology facilitation and negotiation The authors review key methods and discuss case study examples based in their experiences in communities boardrooms and stakeholder meetings The goal of this book is to lay out a compelling guide that will change how you think about making environmental decisions Visit www.wiley.com/go/gregory to access the figures and tables from the book

Non-Bayesian Decision Theory Martin Peterson, 2008-06-06 For quite some time philosophers economists and statisticians have endorsed a view on rational choice known as Bayesianism The work on this book has grown out of a feeling that the Bayesian view has come to dominate the academic community to such an extent that alternative non Bayesian positions are seldom extensively researched Needless to say I think this is a pity Non Bayesian positions deserve to be examined with much greater care and the present work is an attempt to defend what I believe to be a coherent and reasonably detailed non Bayesian account of decision theory The main thesis I defend can be summarised as follows Rational agents maximise subjective expected utility but contrary to what is claimed by Bayesians utility and subjective probability should not be defined in terms of preferences over uncertain prospects On the contrary rational decision makers need only consider preferences over certain outcomes It will be shown that utility and probability functions derived in a non Bayesian manner can be used for generating preferences over uncertain prospects that support the principle of maximising subjective expected utility To some extent this non Bayesian view gives an account of what modern decision theory could have been like had decision theorists not entered the Bayesian path discovered by Ramsey de Finetti Savage and others I will not discuss all previous non Bayesian positions presented in the literature

Representation and Solution of Decision Problems Using Sequential Diagrams Zvi Covaliu, 1993

Uncertainty, Rationality, and Agency Wiebe van der Hoek, 2006-08-18 This book collects all the papers that appeared in 2005 in Knowledge Rationality and Action KRA a journal published as a special section of Synthese which addresses contemporary issues in epistemic logic belief revision game and decision theory rational agency planning and theories of action As such the special section appeals to researchers from Computer Science Game Theory Artificial Intelligence Philosophy Knowledge Representation Logic and Agents addressing issues in artificial systems that have to gather information reason about it and then make a sensible decision about what to do next It will be clear already from the contents pages that this book indeed reflects the core of KRA the papers in this volume address degrees of belief or certainty and rational agency The latter has several manifestations often constraints on the agent's belief behaviour or decision making Moreover this book shows that KRA indeed represents a loop in the behaviour of

the agent after having made a decision the life of the agent does not end rather it will do some sensing or collect otherwise the outcome of its decision to update its beliefs or knowledge accordingly and make up its mind about the next decision task

Anticipatory Optimization for Dynamic Decision Making Stephan Meisel, 2011-06-23 The availability of today's online information systems rapidly increases the relevance of dynamic decision making within a large number of operational contexts Whenever a sequence of interdependent decisions occurs making a single decision raises the need for anticipation of its future impact on the entire decision process Anticipatory support is needed for a broad variety of dynamic and stochastic decision problems from different operational contexts such as finance energy management manufacturing and transportation Example problems include asset allocation feed in of electricity produced by wind power as well as scheduling and routing All these problems entail a sequence of decisions contributing to an overall goal and taking place in the course of a certain period of time Each of the decisions is derived by solution of an optimization problem As a consequence a stochastic and dynamic decision problem resolves into a series of optimization problems to be formulated and solved by anticipation of the remaining decision process However actually solving a dynamic decision problem by means of approximate dynamic programming still is a major scientific challenge Most of the work done so far is devoted to problems allowing for formulation of the underlying optimization problems as linear programs Problem domains like scheduling and routing where linear programming typically does not produce a significant benefit for problem solving have not been considered so far Therefore the industry demand for dynamic scheduling and routing is still predominantly satisfied by purely heuristic approaches to anticipatory decision making Although this may work well for certain dynamic decision problems

these approaches lack transferability of findings to other related problems This book has serves two major purposes It provides a comprehensive and unique view of anticipatory optimization for dynamic decision making It fully integrates Markov decision processes dynamic programming data mining and optimization and introduces a new perspective on approximate dynamic programming Moreover the book identifies different degrees of anticipation enabling an assessment of specific approaches to dynamic decision making It shows for the first time how to successfully solve a dynamic vehicle routing problem by approximate dynamic programming It elaborates on every building block required for this kind of approach to dynamic vehicle routing Thereby the book has a pioneering character and is intended to provide a footing for the dynamic vehicle routing community
