This text takes an integrated approach toward communications with little dichotomy between Analogue and Digital. Studies of telecommunications in undergraduate Engineering education were traditionally analogue. In fact, until the late 1960s, very few schools were teaching digital communication concepts to undergraduates. As digital communications rapidly replaced analogue communications during the 1970s and 1980s, some universities attempted to keep up with the times by incorporating some digital communications into a first course in communications. Others proposed separate courses dealing with digital communications, often with analogue communications as the prerequisite.
