The Spinning Magnet Alanna Mitchell, 2018-01-30 The mystery of Earth's invisible life supporting power Alanna Mitchell's globe trotting history of the science of electromagnetism and the Earth's magnetic field right up to the latest indications that the North and South Poles may soon reverse with apocalyptic results will soon change the way you think about our planet Award winning journalist Alanna Mitchell's science storytelling introduce intriguing characters from the thirteenth century French investigations into magnetism and the Victorian era discover that electricity and magnetism emerge from the same fundamental force to the latest research No one has ever told so eloquently how the Earth itself came to be seen as a magnet spinning in space with two poles and that those poles have dramatically reversed many time often coinciding with mass extinctions The most recent reversal was 780 000 years ago Mitchell explores indications that the Earth's magnetic force field is decaying faster than previously thought When the poles switch a process that takes many years the Earth is unprotected from solar radiation storms that would among other disturbances wipe out much and possibly all of our electromagnetic technology Navigation for all kinds of animals is disrupted without a stable magnetic North Pole But can you imagine no satellites no Internet no smartphones maybe no power grids at all Alanna Mitchell offers a beautifully crafted narrative history of surprising ideas and science illuminating invisible parts of our own planet that are constantly changing around us
