

Use the impulse-momentum theorem for a system to solve these problems.

$$\vec{I}_{\text{total, ext}} = \Delta \vec{p}_{\text{sys}}$$

Question 1

You (50 kg) and a box (10 kg) are both on a frictionless surface. You push on the box with a force of 30 N over a time of 4 seconds before you let go.

Use the impulse-momentum theorem to find the following.

- What is your final velocity right after you let go?
- What is the box's final velocity right after you let go?

Use Newton's second law to find the following.

- What is your acceleration during the 4 seconds you were pushing?
- What is the acceleration of the box during the 4 seconds you were pushing?

Here is the part of the question where you can use anything but momentum to solve (since the acceleration is constant).

- How far did you travel after the 4 seconds?
- How far did the box travel after the 4 seconds?
