Modern Optics B D Guenther Erjv:

Modern Optics B. D. Guenther, 2015-10-23 Modern Optics is a fundamental study of the principles of optics using a rigorous physical approach based on Maxwell's Equations. The treatment provides the mathematical foundations needed to understand a number of applications such as laser optics, fiber optics, and medical imaging covered in an engineering curriculum as well as the traditional topics covered in a physics-based course in optics. In addition to treating the fundamentals in optical science, the student is given an exposure to actual optics engineering problems such as paraxial matrix optics, aberrations with experimental examples, Fourier transform optics, Fresnel Kirchhoff formulation, Gaussian waves, thin films, photonic crystals, surface plasmons, and fiber optics. Through its many pictures, figures, and diagrams, the text provides a good physical insight into the topics covered. The course content can be modified to reflect the interests of the instructor as well as the student through the selection of optional material provided in appendixes. *Modern Optics Simplified* Robert D. Guenther, 2019 This text reduces the complexity of the coverage of optics to allow students with elementary calculus to learn the principles of optics and modern Fourier theory of diffraction and imaging. Each chapter offers simple examples from real engineering problems and includes current topics in imaging such as optical coherence tomography and fiber optics. Encyclopedia of Modern Optics Bob D. Guenther, Duncan Steel, 2018-02-14 The Encyclopedia of Modern Optics Second Edition Five Volume Set provides a wide-ranging overview of the field comprising authoritative reference articles for undergraduate and postgraduate students and those researching outside their area of expertise. Topics covered include classical and quantum optics, lasers, optical fibers and optical fiber systems, optical materials and light emitting diodes, LEDs. Articles cover all subfields of optical physics and engineering such as electro-optical design of modulators and detectors. This update contains contributions from international experts who discuss topics such as nano-photonics and plasmonics, optical interconnects, photonic crystals and 2D materials such as graphene or hollow fibers. Other topics of note include solar energy, high efficiency LEDs and their use in illumination, orbital angular momentum, quantum optics and information, metamaterials and transformation optics, high power fiber and UV fiber lasers, random lasers and bio-imaging. Addresses recent developments in the field and integrates concepts from fundamental physics with applications for manufacturing and engineering design. Provides a broad and interdisciplinary coverage of specialist areas. Ensures that the material is appropriate for new researchers and those working in a new sub-field as well as those in industry. Thematically arranged and alphabetically indexed with cross references added to facilitate ease of use. Modern Optics, 2024

Modern Optics Furtak, 1996-04-01 **Modern Optics** B. D. Guenther, 1990 Introduction to Modern Optics Grant R. Fowles, 1989-01-01 This incisive text provides a basic undergraduate level course in modern optics for students in physics, technology, and engineering. The first half of the book deals with classical physical optics; the second principally with the quantum nature of light. Chapters 1 and 2 treat the propagation of light waves including the concepts of phase and group

velocities and the vectorial nature of light Chapter 3 applies the concepts of partial coherence and coherence length to the study of interference and Chapter 4 takes up multiple beam interference and includes Fabry Perot interferometry and multilayer film theory Diffraction and holography are the subjects of Chapter 5 and the propagation of light in material media including crystal and nonlinear optics are central to Chapter 6 Chapters 7 and 8 introduce the quantum theory of light and elementary optical spectra and Chapter 9 explores the theory of light amplification and lasers Chapter 10 briefly outlines ray optics in order to introduce students to the matrix method for treating optical systems and to apply the ray matrix to the study of laser resonators Many applications of the laser to the study of optics are integrated throughout the text The author assumes students have had an intermediate course in electricity and magnetism and some advanced mathematics beyond calculus For classroom use a list of problems is included at the end of each chapter with selected answers at the end of the book
