Perspectives on Labour Economics for Development

Sandrine Cazes, Sher Verick, 2013. In developing countries, labour markets play a central role in determining economic and social progress, since employment status is one of the key determinants of exiting poverty and promoting inclusion. Yet the reality in most developing countries is that the labour market fails to create the jobs in the formal economy that would help individuals and their families prosper. In recognition of these challenges, governments and other stakeholders in developing countries have increasingly prioritised policies and programmes to promote decent work. However, this requires navigating a range of complex issues and debates surrounding the linkages between development processes and labour market outcomes. This volume consists of three main thematic parts. Part I provides a broad overview of key issues, including characterising the employment challenge in developing countries and the link between economic growth, distribution, poverty, and employment. Drawing on the literature and country examples, Part II analyses the specific topics of wages, migration, and education. The final section shifts to a more normative focus, addressing labour market institutions and policies, along with systematic approaches to quantifying labour markets in developing countries. *Perspectives on Labour Economics for Development* is an invaluable reference for policy makers in middle and low income countries, as well as an ideal handbook for teachers and students of economics and development.
