Multivariate And Mixture Distribution Rasch Models Extensions And Applications Statistics For Social And Behavioral Sciences:

Multivariate and Mixture Distribution Rasch Models Matthias Davier, Claus H. Carstensen, 2007-12-15 This volume gathers together a set of extensions of the Rasch model one of the most prominent models for measurement in educational research and social science developed by Danish mathematician Georg Rasch The idea for this volume emerged during a meeting of the Psychometric Society in Monterey CA At that meeting friends and colleagues discussed news about the impending retirement of Dr Jurgen Rost an important innovator and mentor in this field To recognize Jurgen's contributions we decided to produce a collection of research on extending the Rasch model as well as embedding the Rasch model in more complex statistical models an area that is receiving broad interest in many fields of social sciences at the current time This collection contains 22 chapters by recognized international experts in the field

The contributions cover topics ranging from general model extensions to application in fields as diverse as cognition personality organizational and sports psychology and health sciences and education The Rasch model is designed for categorical data often collected as examinees' responses to multiple tasks such as cognitive items from psychological tests or from educational assessments The Rasch model's elegant mathematical form is suitable for extensions that allow for greater flexibility in handling complex samples of examinees and collections of tasks from different domains In these extensions the Rasch model is enhanced by additional structural elements that account either for differences between diverse populations or for differences among observed variables [Innovative Digital-Based International Large-Scale Assessments](#) Lale Khorramdel, Matthias von

Davier, Kentaro Yamamoto, 2025-10-10 This edited volume provides a comprehensive overview of the technology driven innovations that have transformed National and International Large Scale Assessments over the past decade along with the research and considerations that have accompanied these changes It documents the groundwork for ongoing innovations and explores future directions as these assessments continue to evolve While the impact of technology on education and assessments is difficult to predict best practices and emerging principles for transitioning from paper based to digital formats can be described The volume offers guidelines and examples from experts who have transitioned assessments like PISA PIAAC TIMSS PIRLS and NAEP into the digital era It also highlights research on digital based assessments showcasing new insights from log file and process data as well as innovative domains
