Sullivan, 2020-03-26 [Biotic Pest Disturbance - Risk, Evaluation, and Management in Forest Ecosystems](#) Roman Modlinger, Milica Zlatkovic, David Janik, 2025-10-21 A significant increase of disturbances events in forest ecosystems worldwide has been witnessed during the last decades The most important disturbance agents are wind drought fire insects and pathogens except for direct human activities The main causes of higher frequency disturbance incidence are i climate change affecting the balance of ecosystems accompanied by an increase in the frequency of extreme events ii biological invasions associated primarily with the intensive development of international travel and trade iii economically oriented silvicultural management affecting the species composition and structures of forests However disturbances are an essential factor in the dynamics of natural forests by understanding these we can comprehend the changes in processes

which are currently taking place in forested landscapes A fundamental challenge for current efforts for sustainable forestry is to incorporate the increased frequency of disturbances in forest ecosystems into strategies of forest management
