

EXTENSIVE AND INTENSIVE PROPERTIES

An extensive property is the one that is equal to the sum of its values for the parts of the system. Thus, it depends on the quantity. The mass of the system is the sum of the masses of the parts; mass is an extensive property. So is volume. Properties that do not depend on the amount of matter in system are called intensive. Ratio of the extensive property results in an intensive property. Density, molar volume and pressure are examples of intensive properties.

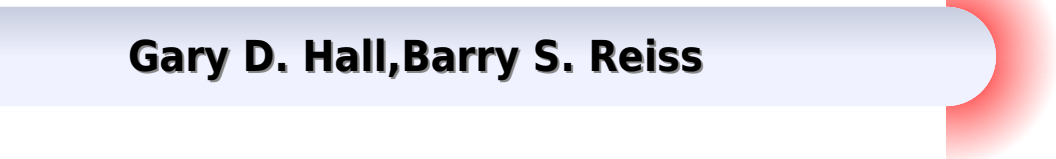

PARTIAL MOLAR VOLUME

Suppose we form a solution by mixing (at constant temperature and pressure) $n_1, n_2, \dots, n_j$ moles of substances 1, 2, ..., j. Let $V_1^*, \dots, V_j^*$ be the molar volumes of pure substances and let V^* be the total volume of the unmixed components at T and P.

$$V^* = n_1 V_1^* + n_2 V_2^* + \dots + n_j V_j^* \quad (1)$$
