Plant-Environment Interactions Bingru Huang, 2016-04-19 With contributions from experts in various specialties Plant Environment Interactions discusses recent advances in cellular and molecular regulation of stress tolerance This third edition reviews new research in stress signal perception cellular mechanisms and genetic manipulation of stress tolerance for each individual stress It addresses how to evaluate the level of plant tolerance to stress as well as how to link mechanisms identified through analysis of plant environment interaction to producing stress tolerant germplasm through biotechnology and traditional breeding It also examines environmental stresses limiting plant productivity in agriculture horticulture and forestry

Pre-Field Screening Protocols for Heat-Tolerant Mutants in Rice Fatma Sarsu, Abdelbagi M.A. Ghanim, Priyanka Das, Rajeev N. Bahuguna, Paul Mbogo Kusolwa, Muhammed Ashraf, Sneh L. Singla-Pareek, Ashwani Pareek, Brian P. Forster, Ivan Ingelbrecht, 2018-08-09 This open access book presents simple robust pre field screening protocols that allow plant breeders to screen for enhanced tolerance to heat stress in rice Two critical heat sensitive stages in the lifecycle of the rice crop are targeted the seedling and flowering stages with screening based on simple phenotypic responses The protocols are based on the use of a hydroponics system and or pot experiments in a glasshouse in combination with a controlled growth chamber where the heat stress treatment is applied The protocols are designed to be effective simple reproducible and user friendly The protocols will enable plant breeders to effectively reduce the number of plants from a few thousands to less than 100 candidate individual mutants or lines in a greenhouse growth chamber which can then be used for further testing and validation in the field conditions The methods can also be used to classify rice genotypes according to their heat tolerance characteristics Thus different types of heat stress tolerance mechanisms can be identified presenting opportunities for pyramiding different mutant sources of heat stress tolerance
