Maximum Likelihood for Social Science Michael D. Ward, John S. Ahlquist, 2018-11-15 This volume provides a practical introduction to the method of maximum likelihood as used in social science research Ward and Ahlquist focus on applied computation in R and use real social science data from actual published research Unique among books at this level it develops simulation based tools for model evaluation and selection alongside statistical inference The book covers standard models for categorical data as well as counts duration data and strategies for dealing with data missingness By working through examples math and code the authors build an understanding about the contexts in which maximum likelihood methods are useful and develop skills in translating mathematical statements into executable computer code Readers will not only be taught to use likelihood based tools and generate meaningful interpretations but they will also acquire a solid foundation for continued study of more advanced statistical techniques

Toward a Unified View of the Speed-Accuracy Trade-Off: Behaviour, Neurophysiology and Modelling Dominic Standage, Da-Hui Wang, Richard P. Heitz, Patrick Simen, 2016-02-18 Everyone is familiar with the speed accuracy trade off SAT To make good choices we need to balance the conflicting demands of fast and accurate decision making After all hasty decisions often lead to poor choices but accurate decisions may be useless if they take too long This notion is intuitive because it reflects a fundamental aspect of cognition not only do we deliberate over the evidence for decisions but we can control that deliberative process This control raises many questions for the study of choice behaviour and executive function For example how do we figure out the appropriate balance between speed and accuracy on a given task How do we impose that balance on our decisions and what is its neural basis Researchers have addressed these and related questions for decades using a variety of methods and offering answers at different levels of abstraction Given this diverse methodology our aim is to provide a unified view of the SAT Extensive analysis of choice behaviour suggests that we make decisions by accumulating evidence until some criterion is reached Thus adjusting the criterion controls how long we accumulate evidence and therefore the speed and accuracy of decisions This simple framework provides the platform for our unified view In the pages that follow leading experts in decision neuroscience consider the history of SAT research strategies for determining the optimal balance between speed and accuracy conditions under which this seemingly ubiquitous phenomenon breaks down and the neural mechanisms that may implement the computations of our unifying framework

Mellor, 2007-06-01 Gaussian Random Fields - Proceedings Of The Third Nagayo Levy Seminar Kazufumi Ito, Takeyuki Hida, 1991-11-29 These proceedings emphasize new mathematical problems discussed in line with white noise analysis Many papers deal with mathematical questions arising from actual phenomena Various applications to stochastic differential equations quantum field theory functional integration such as Feynman integrals limit theorems in probability are also discussed *Journal of the Institution of Electrical Engineers*, 1922 **Proceedings of the Institution of Electrical**

Selecting Models from Data P. Cheeseman, R.W. Oldford, 2012-12-06 This volume is a selection of papers presented at the Fourth International Workshop on Artificial Intelligence and Statistics held in January 1993. These biennial workshops have succeeded in bringing together researchers from Artificial Intelligence and from Statistics to discuss problems of mutual interest. The exchange has broadened research in both fields and has strongly encouraged interdisciplinary work. The theme of the 1993 AI and Statistics workshop was *Selecting Models from Data*. The papers in this volume attest to the diversity of approaches to model selection and to the ubiquity of the problem. Both statistics and artificial intelligence have independently developed approaches to model selection and the corresponding algorithms to implement them. But as these papers make clear, there is a high degree of overlap between the different approaches. In particular, there is agreement that the fundamental problem is the avoidance of overfitting, i.e. where a model fits the given data very closely but is a poor predictor for new data. In other words, the model has partly fitted the noise in the original data. *Nuclear Science Abstracts*, 1970

Interfacial Electrochemistry Andrzej Wieckowski, 2017-11-22 This text probes topics and reviews progress in interfacial electrochemistry. It supplies chapter abstracts to give readers a concise overview of individual subjects and there are more than 1500 drawings, photographs, micrographs, tables and equations. The 118 contributors are international scholars who present theory, experimentation and applications. Thoroughly revised and updated, it provides fundamental and state-of-the-art discussion of all aspects of geophysics. A highlight of the second edition is a new volume on Near Surface Geophysics that discusses the role of geophysics in the exploitation and conservation of natural resources and the assessment of degradation of natural systems by pollution. Additional features include new material in the Planets and Moon, Mantle Dynamics, Core Dynamics, Crustal and Lithosphere Dynamics, Evolution of the Earth and Geodesy volumes. New material is also presented on the uses of Earth gravity measurements. This title is essential for professionals, researchers, professors and advanced undergraduate and graduate students in the fields of Geophysics and Earth system science. Comprehensive and detailed coverage of all aspects of geophysics. Fundamental and state-of-the-art discussions of all research topics. Integration of topics into a coherent whole.

Nonlinear Control Under Nonconstant Delays Nikolaos Bekiaris-Liberis, Miroslav Krstic, 2013-09-25 The authors have developed a methodology for control of nonlinear systems in the presence of long delays with large and rapid variation in the actuation or sensing path or in the presence of long delays affecting the internal state of a system. In addition to control synthesis, they introduce tools to quantify the performance and the robustness properties of the designs provided in the book. The book is based on the concept of predictor feedback and infinite-dimensional backstepping transformation for linear

systems and the authors guide the reader from the basic ideas of the concept with constant delays only on the input all the way through to nonlinear systems with state dependent delays on the input as well as on system states Readers will find the book useful because the authors provide elegant and systematic treatments of long standing problems in delay systems such as systems with state dependent delays that arise in many applications In addition the authors give all control designs by explicit formulae making the book especially useful for engineers who have faced delay related challenges and are concerned with actual implementations and they accompany all control designs with Lyapunov based analysis for establishing stability and performance guarantees

Fundamentals of Nonlinear Optics
Peter E. Powers, 2011-05-25 Fundamentals of Nonlinear Optics encompasses a broad spectrum of nonlinear phenomena from second harmonic generation to soliton formation The wide use of nonlinear optical phenomena in laboratories and commercial devices requires familiarity with the underlying physics as well as practical device considerations This text adopts a combined approach to analyze the complimentary aspects of nonlinear optics enabling a fundamental understanding of both a given effect and practical device applications After a review chapter on linear phenomena important to nonlinear optics the book tackles nonlinear phenomena with a look at the technologically important processes of second harmonic

generation sum frequency and difference frequency generation and the electro optic effect The author covers these processes in considerable detail at both theoretical and practical levels as the formalisms developed for these effects carry to subsequent topics such as four wave mixing self phase modulation Raman scattering Brillouin scattering and soliton formation Consistently connecting theory process effects and applications this introductory text encourages students to master key concepts and to solve nonlinear optics problems preparing them for more advanced study Along with extensive problems at the end of each chapter it presents general algorithms accessible to any scientific graphical and programming package Watch the author speak about the book

State Lasers P. Hammerling,A.B. Budgor,A. Pinto,2013-04-17 In recent years there has been renewed interest in the scientific and industrial communities in tunable solid state vibronic lasers Much of this has been spurred by the user desirous of obtaining compact primary laser sources independent of nonlinear optical frequency shifts throughout the visible and near infra red spectral regions To further motivate and stimulate research and development in this area workshops sponsored by the Laser Division of the US Army Night Vision Electro Optics Laboratory NVEOL at Fort Belvoir Virginia were held during 1-3 April 1981 and 16-17 June 1983 at Keystone and NVEOL respectively The consensus of opinion of the participants at these workshops was that any successful program leading to the identification and development of vibronic tunable laser materials in the visible and IR must include coordinated activity between crystal growers theoretical and experimental investigators into the fundamental processes of vibronic lasing and laser device engineers Continued interaction between government industry and academia was encouraged in order to establish a unified approach to these areas and when necessary redefine and redirect programmatic activity The organization of this 1st Annual Conference on Tunable Solid State Lasers held at the La Jolla Institute 13-15 June 1984 was based around the latest results in tunable vibronic materials and laser development but structured in a manner consistent with the recommendations of the NVEOL workshops
