Multiple-Choice Questions in Organic Chemistry

Multiple choice questions usually include a phrase or stem followed by three to five options/choices.

Test strategies :

- Read the directions carefully
- Know if you are penalized for guessing
- Answer easy questions first

Answering options :

- *Improve your odds, think critically*
- *Hide the options, read the stem, and try to answer*

Select the option that most closely matches your answer

- *Read the stem with each option*

Treat each option as a true-false question, and choose the “most true”

Strategies to answer difficult questions :

- *Eliminate options you know to be incorrect*
- *Question options that are totally unfamiliar to you*
- *Question options that contain negative or absolute words*
- *“All of the above”*

If you know two of the three options seem correct, “all of the above” is a strong possibility

- *Number answers :*

Toss out the high and low and consider the middle range numbers

- *“Look alike options”*

Probably one is correct; choose the best but eliminate choices that mean basically the same thing, and thus cancel each other out

- *Echo options :*

If two options are opposite each other , chances are one of them is correct

- *If two alternatives seem correct,*
compare them for differences,
