Innocent Ejiro Okoloko, 2020-09-26

The book is a collection of experiments using a single advanced 8-bit microcontroller from Microchip R the PIC18F2431. The language used is XC8 free from Microchip R and there is no theoretical burden. The programming environment used is MPLAB X also free from Microchip R. The book is intended for use in companion with a theoretical reading course on embedded systems or similar course along with the PIC18F2431 datasheet Microchip document DS39616D and all other datasheets that are included in each experiment which should be used as reference guides. With the datasheet of any other processor different from the PIC18F2431 the book can also be used with that PIC microcontroller. All one needs to do is to look for the similar pinouts and ports in the datasheet of the other microcontroller and follow the examples in this book. So the knowledge gained here can be applied to other PIC microcontrollers with a little more effort.

This book is a sequel to my first experiments lab book PIC EXPERIMENTS LAB BOOK USING PIC16F877A and XC8. The previous book contained 29 Experiments; this book contains 56 Experiments. I observed that a required LCD header file CHARACTER_MAP.h was omitted by error in the previous book. This book includes not only the CHARACTER_MAP.h but also a complete LCD library header file SUNPLUSLCD.h which uses the CHARACTER_MAP.h. Moreover, a new USART library file UART.h has been included. All the experiments implementing USART with RS232 have been replicated using Bluetooth, and even more experiments on Bluetooth are added. This is because it is more convenient and economical to implement serial communication using Bluetooth than RS232 as long as the environment is not too noisy.

Other new experiments are FTDI232, SPI, SONAR, temperature sensor, temperature controlled fan, relay, signal processing using drone radio transmitter and receiver, multichannel ADC, brushless DC motor, BLDC, ESC, bipolar stepper, full step, 1 phase and 2 phase bipolar half step, and a light seeking robot. In addition, all codes are printed with the full MPLAB X colour for readability and understanding. The diagrams have been redrawn and posted as high quality svg images in full colour. Two new chapters, Power supply and Equipment and tools, have been included. A section on troubleshooting has also been included after every similar experiment. Future editions will include more experiments and projects.
