Categorical Data Analysis for the Behavioral and Social Sciences Razia Azen, Cindy M. Walker, 2021-05-26

Featuring a practical approach with numerous examples the second edition of Categorical Data Analysis for the Behavioral and Social Sciences focuses on helping the reader develop a conceptual understanding of categorical methods making it a much more accessible text than others on the market The authors cover common categorical analysis methods and emphasize specific research questions that can be addressed by each analytic procedure including how to obtain results using SPSS SAS and R so that readers are able to address the research questions they wish to answer Each chapter begins with a Look Ahead section to highlight key content This is followed by an in depth focus and explanation of the relationship between the initial research question the use of software to perform the analyses and how to interpret the output substantively Included at the end of each chapter are a range of software examples and questions to test knowledge New to the second edition The addition of R syntax for all analyses and an update of SPSS and SAS syntax The addition of a new chapter on GLMMs Clarification of concepts and ideas that graduate students found confusing including revised problems at the end of the chapters Written for those without an extensive mathematical background this book is ideal for a graduate course in categorical data analysis taught in departments of psychology educational psychology human development and family studies sociology public health and business Researchers in these disciplines interested in applying these procedures will also appreciate this book s accessible approach *Statistical Methods for Categorical Data Analysis* Daniel Powers, Yu Xie, 2008-11-13 This book provides a comprehensive introduction to methods and models for categorical data analysis and their applications in social science research Companion website also available at <https://web.space.utexas.edu/dpowers> www

Regression for Categorical Data Gerhard Tutz, 2011-11-21 This book introduces basic and advanced concepts of categorical regression with a focus on the structuring constituents of regression including regularization techniques to structure predictors In addition to standard methods such as the logit and probit model and extensions to multivariate settings the author presents more recent developments in flexible and high dimensional regression which allow weakening of assumptions on the structuring of the predictor and yield fits that are closer to the data A generalized linear model is used as a unifying framework whenever possible in particular parametric models that are treated within this framework Many topics not normally included in books on categorical data analysis are treated here such as nonparametric regression selection of predictors by regularized estimation procedures ternative models like the hurdle model and zero inflated regression models for count data and non standard tree based ensemble methods The book is accompanied by an R package that contains data sets and code for all the examples **The Analysis of Cross-Classified Categorical Data** Stephen E. Fienberg, 2007-07-30 Until recent years the statistical and computational techniques available for the analysis of cross classified data were quite limited This book presents some of the recent work on the statistical analysis of cross classified data using longlinear models
