Soil Organic Matter and Feeding the Future Rattan Lal, 2021-12-08 Soil organic matter SOM is the primary determinant of soil functionality Soil organic carbon SOC accounts for 50% of the SOM content accompanied by nitrogen phosphorus and a range of macro and micro elements As a dynamic component SOM is a source of numerous ecosystem services critical to human well being and nature conservancy Important among these goods and services generated by SOM include moderation of climate as a source or sink of atmospheric CO₂ and other greenhouse gases storage and purification of water a source of energy and habitat for biota macro meso and micro organisms a medium for plant growth cycling of elements N P S etc and generation of net primary productivity NPP The quality and quantity of NPP has direct impacts on the food and nutritional security of the growing and increasingly affluent human population Soils of agroecosystems are depleted of their SOC reserves in comparison with those of natural ecosystems The magnitude of depletion depends on land use and the type and severity of degradation Soils prone to accelerated erosion can be strongly depleted of their SOC reserves especially those in the surface layer Therefore conservation through restorative land use and adoption of recommended management practices to create a positive soil ecosystem carbon budget can increase carbon stock and soil health This volume of *Advances in Soil Sciences* aims to accomplish the following Present impacts of land use and soil management on SOC dynamics Discuss effects of SOC levels on agronomic productivity and use efficiency of inputs Detail potential of soil management on the rate and cumulative amount of carbon sequestration in relation to land use and soil crop management Deliberate the cause effect relationship between SOC content and provisioning of some ecosystem services Relate soil organic carbon stock to soil properties and processes Establish the relationship between soil organic carbon stock with land and climate Identify controls of making soil organic carbon stock as a source or sink of CO₂ Connect soil organic carbon and carbon sequestration for climate mitigation and adaptation *Soils and Food Security* Ronald E. Hester, Roy M.

Harrison, 2012 This book the 35th volume of *Issues in Environmental Science and Technology* examines the current status of soils across the globe and their potential for food production to meet the needs of the World's population in the 21st Century

Soil Degradation and Restoration in Africa Rattan Lal, B. A. Stewart, 2019-07-09 Soil degradation is a widespread problem in Africa resulting in decreased agricultural productivity while demand for food continues to increase Degradation is caused by accelerated erosion acidification contamination depletion of soil organic matter and plant nutrients and salinization The major cause of soil degradation in Africa is uncontrolled and excessive grazing in the savanna regions followed by deforestation and the use of inappropriate and extractive farming practices Perpetual neglect of the health of soils in Africa can exacerbate the already serious problems of food and nutritional insecurity and environmental degradation Food and nutritional security of the growing population of Africa can only be achieved if degraded soils are restored and soils of agroecosystems are managed prudently and sustainably Ignoring soils and taking the fragile finite and precious soil

resources for granted is the principal cause of poverty hunger and environmental degradation The downward spiral must be reversed through soil restoration measures based on translating science into action This book describes the soils of Africa processes of soil degradation extent and severity of soil degradation and the impacts of degradation processes on food and nutritional security Features Explores the extent and severity of soil degradation in Africa Analyzes the cause effect relationship between anthropogenic activities and soil degradation Reviews processes of soil degradation in Africa including erosion salinization nutrient depletion and decline of soil organic matter Addresses the effect of climate change on soil degradation in Africa Explains how soil degradation causes food and nutritional insecurity Part of the Advances in Soil Sciences series this volume is specifically devoted to the processes and factors that cause soil degradation and the challenges and potential for remediation and restoration of soil health in Africa

Management in sub-Saharan Africa: Challenges and Opportunities Andre Bationo, Boaz Waswa, Job Kihara, Joseph Kimetu, 2007-10-16

Food insecurity is a fundamental challenge to human welfare and economic growth in Africa Low agricultural production leads to low incomes poor nutrition vulnerability to risk and threat and lack of empowerment This book offers a comprehensive synthesis of agricultural research and development experiences from sub Saharan Africa The text highlights practical lessons from the sub Saharan Africa region

Managing Organic Matter in Tropical Soils: Scope and Limitations Christopher Martius, Holm Tiessen, Paul L.G. Vlek, 2013-11-11

Soil organic matter is a reservoir for plant nutrients provides water holding capacity stabilizes soil structure against compaction and erosion and thus determines soil productivity All agriculture to some degree depends on soil organic matter It has long been known that soil organic matter declines when land is taken into cultivation and that the productivity of new agricultural land is governed by fertility contributions from decomposing natural organic matter The expansion of agriculture to ever new and more fragile lands particularly in tropical and developing regions causes environmental degradation with local effects on soil quality regional effects on landscape integrity and water quality and global effects on carbon cycles and the atmosphere This book summarizes current knowledge of the properties and dynamics of soil organic matter in the tropics its role in determining soil quality its stability and turnover and the options for management in the context of tropical landuse systems for a readership of resource scientists economists and advanced students Maintenance of organic matter is critical for preventing land degradation Case studies and practical applications are therefore an important part of the book as are the exploration of future directions in research and management

Innovations as Key to the Green Revolution in Africa

Andre Bationo, Boaz Waswa, Jeremiah M. Okeyo, Fredah Maina, Job Maguta Kihara, 2011-08-30

Africa can achieve self sufficiency in food production through adoption of innovations in the agriculture sector Numerous soil fertility and crop production technologies have been generated through research however wide adoption has been low African farmers need better technologies more sustainable practices and fertilizers to improve and sustain their crop productivity and to prevent further

degradation of agricultural lands The agricultural sector also needs to be supported by functional institutions and policies that will be able to respond to emerging challenges of globalization and climate change

Crop Nutrition

Soil and Fertilizers Rattan Lal, 2020-05-06 *Soil and Fertilizers Managing the Environmental Footprint* presents strategies to improve soil health by reducing the rate of fertilizer input while maintaining high agronomic yields. It is estimated that fertilizer use supported nearly half of global births in 2008. In a context of potential food insecurity exacerbated by population growth and climate change, the importance of fertilizers in sustaining the agronomic production is clear. However, excessive use of chemical fertilizers poses serious risks both to the environment and to human health. Highlighting a tenfold increase in global fertilizer consumption between 2002 and 2016, the book explains the effects on the quality of soil, water, air, and biota from overuse of chemical fertilizers. Written by an interdisciplinary author team, this book presents methods for enhancing the efficiency of fertilizer use and outlines agricultural practices that can reduce the environmental footprint. Features include a thorough literature review on the agronomic and environmental impact of fertilizer, from degradation of ecosystems to the eutrophication of drinking water. Devotes specific chapters to enhancing the use efficiency and effectiveness of the fertilizers through improved formulations, time and mode of application, and the use of precision farming technology. Reveals geographic variation in fertilizer consumption volume by presenting case studies for specific countries and regions including India and Africa. Discusses the pros and cons of organic vs chemical fertilizers, innovative technologies including nuclear energy, and the U.N.'s Sustainable Development Goals. Part of the *Advances in Soil Sciences* series, this solutions-focused volume will appeal to soil scientists, environmental scientists, and agricultural engineers.

Advances in Agronomy, 2004-02-06 *Advances in Agronomy* continues to be recognized as a leading reference and a first-rate source of the latest research in agronomy. Major reviews deal with the current topics of interest to agronomists as well as crop and soil scientists. As always, the subjects covered are varied and exemplary of the myriad subject matter dealt with by this long-running serial. Editor Donald Sparks, former president of the Soil Science Society of America and current president of the International Union of Soil Science, is the S. Hallock du Pont Chair of Plant and Soil Sciences at The University of Delaware. Volume 82 contains eight state-of-the-art reviews on topics of interest in the plant and soil sciences. Three of the reviews present cutting-edge molecular-scale techniques and approaches that directly impact food production, crop improvement, and environmental quality and sustainability.
