Satellite Orbits Models, Methods, Applications (+ Cd) O. Montenbruck, **Satellite Orbits** Oliver Montenbruck, Eberhard Gill, 2012-12-06 *Satellite Orbits Models Methods and Applications* has been written as a comprehensive textbook that guides the reader through the theory and practice of satellite orbit prediction and determination Starting from the basic principles of orbital mechanics it covers elaborate force models as well as precise methods of satellite tracking and their mathematical treatment A multitude of numerical algorithms used in present day satellite trajectory computation is described in detail with proper focus on numerical integration and parameter estimation The wide range of levels provided renders the book suitable for an advanced undergraduate or graduate course on spaceflight mechanics up to a professional reference in navigation geodesy and space science Furthermore we hope that it is considered useful by the increasing number of satellite engineers and operators trying to obtain a deeper understanding of flight dynamics The idea for this book emerged when we realized that documentation on the methods models and tools of orbit determination was either spread over numerous technical and scientific publications or hidden in software descriptions that are not in general accessible to a wider community Having worked for many years in the field of spaceflight dynamics and satellite operations we tried to keep in close touch with questions and problems that arise during daily work and to stress the practical aspects of orbit determination Nevertheless our interest in the underlying physics motivated us to present topics from first principles and make the book much more than just a cookbook on spacecraft trajectory computation

Spacecraft Dynamics and Control Enrico Canuto, Carlo Novara, Donato Carlucci, Carlos Perez-Montenegro, Luca Massotti, 2018-03-08 *Spacecraft Dynamics and Control The Embedded Model Control Approach* provides a uniform and systematic way of approaching space engineering control problems from the standpoint of model based control using state

space equations as the key paradigm for simulation design and implementation The book introduces the Embedded Model Control methodology for the design and implementation of attitude and orbit control systems The logic architecture is organized around the embedded model of the spacecraft and its surrounding environment The model is compelled to include disturbance dynamics as a repository of the uncertainty that the control law must reject to meet attitude and orbit requirements within the uncertainty class The source of the real time uncertainty estimation prediction is the model error signal as it encodes the residual discrepancies between spacecraft measurements and model output The embedded model and the uncertainty estimation feedback noise estimator in the book constitute the state predictor feeding the control law Asymptotic pole placement exploiting the asymptotes of closed loop transfer functions is the way to design and tune feedback loops around the embedded model state predictor control law reference generator The design versus the uncertainty class is driven by analytic stability and performance inequalities The method is applied to several attitude and orbit control problems The book begins with an extensive introduction to attitude geometry and algebra and ends with the core themes state space dynamics and Embedded Model Control Fundamentals of orbit attitude and environment dynamics are treated giving emphasis to state space formulation disturbance dynamics state feedback and prediction closed loop stability Sensors and actuators are treated giving emphasis to their dynamics and modelling of measurement errors Numerical tables are included and their data employed for numerical simulations Orbit and attitude control problems of the European GOCE mission are the inspiration of numerical exercises and simulations The suite of the attitude control modes of a GOCE like mission is designed and simulated around the so called mission state predictor Solved and unsolved exercises are included within the text and not separated at the end of chapters for better understanding training and application Simulated results and their graphical plots are developed through MATLAB Simulink code
