Yee, 2012-05-10 For more than three decades the US Standard Atmosphere has been used by researchers and professionals in many areas of aeronautics and atmospheric sciences It is an idealized all season average temperature profile of the earth's atmosphere But today's modern day and sophisticated global applications require more extensive representations of the mean temperature profile This book is a global augmentation of the climatological tropospheric temperature profiles in the Northern Hemisphere for different latitude belts and seasons There are 72 mean temperature profile tables from the surface up to 10 kilometers in height that represent the four seasons for different latitudinal belts 5 N 10 N 15 N 20 N 25 N 30 N 35 N 40 N 45 N 50 N 55 N 60 N 65 N 70 N 75 N 80 N 85 N The model is based on a neural network algorithm that uses archived radiosonde data retrieved temperature profiles from remote sensors and the solar insolation at the top of the earth's atmosphere It is the most comprehensive book of mean seasonal tropospheric temperature profiles to date It will be an indispensable reference to the aeronautic and meteorological industries worldwide as well as an easy to use guide for climatologists meteorologists aeronautic engineers researchers and aviators *Subject Guide to Books in Print*, 1996 **American Book Publishing Record**, 1999 Book Catalog of the Library and Information Services Division: Shelf List catalog Environmental Science Information Center.
