Computers, Chess, and Cognition T. Anthony Marsland, Jonathan Schaeffer, 2012-12-06 Computers Chess and Cognition presents an excellent up to date description of developments in computer chess a rapidly advancing area in artificial intelligence research This book is intended for an upper undergraduate and above level audience in the computer science artificial intelligence community The chapters have been edited to present a uniform terminology and balanced writing style to make the material understandable to a wider less specialized audience The book's primary strengths are the

description of the workings of some major chess programs an excellent review of tree searching methods discussion of exciting new research ideas a philosophical discussion of the relationship of computer game playing to artificial intelligence and the treatment of computer Go as an important new research area A complete index and extensive bibliography makes the book a valuable reference work The book includes a special foreword by Ken Thompson author of the UNIX operating system

Search Algorithms and Systems Richard Johnson, 2025-06-14 Search Algorithms and Systems Search Algorithms and Systems is a comprehensive and meticulously structured exploration of search spanning theoretical foundations practical algorithms and cutting edge system designs Beginning with formal models complexity theory and the critical dimensions of optimality and computability the book lays a rigorous groundwork for understanding the diverse landscape of search problems Successive chapters present an in depth analysis of classical and heuristic search algorithms including BFS DFS A and state of the art quantum and learning based heuristic methods all enriched by empirical insights and detailed performance comparisons The text progresses into advanced territory with extensive treatments of stochastic local and metaheuristic approaches such as genetic algorithms swarm intelligence and hybrid metaheuristics as well as a robust examination of constraint and combinatorial search via CSPs SAT solvers and graph based strategies It then pivots to the architecture of real world search systems unveiling the intricacies of information retrieval indexing distributed and cloud native search platforms and scalability challenges while also addressing essential concerns like security privacy and fault tolerance in modern infrastructures Notably the book bridges theoretical innovation and tangible application through dedicated coverage of search in AI and machine learning including automated planning adversarial search reinforcement learning deep neural models and AutoML It culminates with forward looking perspectives on human centered ethical and explainable search hardware accelerated and quantum techniques and diverse applications from bioinformatics to big data analytics Search Algorithms and Systems thus serves as an authoritative resource for researchers engineers and

Beal, 1991-01-01 Algorithms for Games Georgy M. Adelson-Velsky, Vladimir L. Arlazarov, M.V. Donskoy, 2012-12-06

Algorithms for Games aims to provide a concrete example of the programming of a two person game with complete information and to demonstrate some of the methods of solutions to show the reader that it is profitable not to fear a search but rather to undertake it in a rational fashion make a proper estimate of the dimensions of the catastrophe and use all suitable means to keep it down to a reasonable size The book is dedicated to the study of methods for limiting the extent of a search The game programming problem is very well suited to the study of the search problem and in general for multi step solution processes With this in mind the book focuses on the programming of games as the best means of developing the ideas and methods presented While many of the examples are related to chess only an elementary knowledge of the game is

Much water has flowed over the dam since this book went to press in Moscow One might expect that PIONEER would have made substantial advances unfortunately it has not There are reasons the difficulty of the problem the disenchantment of the mathematicians because of the delays and drawing out of the work and principally the insufficiency and some times complete lack of machine time The general method used by PIONEER to solve complex multidimensional search problems had already been formulated at that time It was supposed that the successful completion of the chess program PIONEER 1 would provide a sufficient validation for the method We did not succeed in completing it But unexpectedly PIONEER's method obtained a different kind of validation Since our group of mathematicians works at the Institute for Electrodynamics we were invited to solve some energy related problems and were assigned the task of constructing a program that would plan the reconditioning of the equipment in power stations initially for one month Until then the technicians had been preparing such plans without the aid of computers Although the chess program was not complete even after ten years the program PIONEER 2 for computing the monthly repair schedule for the Interconnected Power System of Russian Central was completed in a few months In mid October of 1980 a medium speed computer constructed the plan in 40 seconds When at the end of the month the mathematician A *Search in Artificial Intelligence* Laveen N.
