Science A Four Thousand Year History:

Science Patricia Fara, 2009 *Science A Four Thousand Year History* rewrites science's past. Instead of focussing on difficult experiments and abstract theories Patricia Fara shows how science has always belonged to the practical world of war, politics and business. Rather than glorifying scientists as idealized heroes she tells true stories about real people, men and some women who needed to earn their living, who made mistakes and who trampled down their rivals in their quest for success. Fara sweeps through the centuries from ancient Babylon right up to the latest hi tech experiments in genetics and particle physics, illuminating the financial interests, imperial ambitions and publishing enterprises that have made science the powerful global phenomenon that it is today. She also ranges internationally illustrating the importance of scientific projects based around the world from China to the Islamic empire as well as the more familiar tale of science in Europe from Copernicus to Charles Darwin and beyond. Above all this four thousand year history challenges scientific supremacy, arguing controversially that science is successful not because it is always right but because people have said that it is right.

Science Patricia Fara, 2009 *A Master of Science History* Jed Z. Buchwald, 2012-01-05 New essays in science history ranging across the entire field and related in most instances to the works of Charles Gillispie, one of the field's founders.

Evolving Nature of Objectivity in the History of Science and its Implications for Science Education Mansoor Niaz, 2017-10-26 This book explores the evolving nature of objectivity in the history of science and its implications for science education. It is generally considered that objectivity, certainty, truth, universality, the scientific method and the accumulation of experimental data characterize both science and science education. Such universal values associated with science may be challenged while studying controversies in their original historical context. The scientific enterprise is not characterized by objectivity or the scientific method but rather controversies, alternative interpretations of data, ambiguity and uncertainty. Although objectivity is not synonymous with truth or certainty, it has eclipsed other epistemic virtues and to be objective is often used as a synonym for scientific. Recent scholarship in history and philosophy of science has shown that it is not the experimental data, Baconian orgy of quantification but rather the diversity, plurality in a scientific discipline that contributes toward understanding objectivity. History of science shows that objectivity and subjectivity can be considered as the two poles of a continuum and this dualism leads to a conflict in understanding the evolving nature of objectivity. The history of objectivity is nothing less than the history of science itself and the evolving and varying forms of objectivity does not mean that one replaced the other in a sequence but rather each form supplements the others. This book is remarkable for its insistence that the philosophy of science and in particular that discipline's analysis of objectivity as the supposed hallmark of the scientific method is of direct value to teachers of science. Meticulously yet in a most readable way Mansoor Niaz looks at the way objectivity has been dealt with over the years in influential educational journals and in textbooks. It's fascinating how certain perspectives fade while basic questions show no sign of going away. There are few books that take both philosophy

and education seriously this one does Roald Hoffmann Cornell University chemist writer and Nobel Laureate in Chemistry

Science and Technology in World History James E. McClellan III, Harold Dorn, 2015-12-15 Arguably the best general history of science and technology ever published Tracing the relationship between science and technology from the dawn of civilization to the early twenty first century James E McClellan III and Harold Dorn s bestselling book argues that technology as applied science emerged relatively recently as industry and governments began funding scientific research that would lead directly to new or improved technologies McClellan and Dorn identify two great scientific traditions the useful sciences which societies patronized from time immemorial and the exploration of questions about nature itself which the ancient Greeks originated The authors examine scientific traditions that took root in China India and Central and South America as well as in a series of Near Eastern empires in late antiquity and the Middle Ages From this comparative perspective McClellan and Dorn survey the rise of the West the Scientific Revolution of the seventeenth century the Industrial Revolution and the modern marriage of science and technology They trace the development of world science and technology today while raising provocative questions about the sustainability of industrial civilization This new edition of *Science and Technology in World History* offers an enlarged thematic introduction and significantly extends its treatment of industrial civilization and the technological supersystem built on the modern electrical grid The Internet and social media receive increased attention Facts and figures have been thoroughly updated and the work includes a comprehensive Guide to Resources incorporating the major published literature along with a vetted list of websites and Internet resources for students and lay readers

Animal, Vegetable, Mineral? Susannah Gibson, 2015-07-23 Since the time of Aristotle there had been a clear divide between the three kingdoms of animal vegetable and mineral But by the eighteenth century biological experiments and the wide range of new creatures coming to Europe from across the world challenged these neat divisions Abraham Trembley found that freshwater polyps grew into complete individuals when cut This shocking discovery raised deep questions was it a plant or an animal And this was not the only conundrum What of coral Was it a rock or a living form Did plants have sexes like animals The boundaries appeared to blur And what did all this say about the nature of life itself Were animals and plants soul less mechanical forms as Descartes suggested The debates raging across science played into some of the biggest and most controversial issues of Enlightenment Europe In this book Susannah Gibson explains how a study of pond slime could cause people to question the existence of the soul observation of eggs could make a man doubt that God had created the world how the discovery of the Venus fly trap was linked to the French Revolution and how interpretations of fossils could change our understanding of the Earth s history Using rigorous historical research and a lively and readable style this book vividly captures the big concerns of eighteenth century science And the debates concerning the divisions of life did not end there they continue to have resonances in modern biology

A New History of the Humanities Rens Bod, 2013-11-14 Many histories of science have been written but *A New History of the Humanities* offers the first overarching history of the

humanities from Antiquity to the present There are already historical studies of musicology logic art history linguistics and historiography but this volume gathers these and many other humanities disciplines into a single coherent account Its central theme is the way in which scholars throughout the ages and in virtually all civilizations have sought to identify patterns in texts art music languages literature and the past What rules can we apply if we wish to determine whether a tale about the past is trustworthy By what criteria are we to distinguish consonant from dissonant musical intervals What rules jointly describe all possible grammatical sentences in a language How can modern digital methods enhance pattern seeking in the humanities Rens Bod contends that the hallowed opposition between the sciences mathematical experimental dominated by universal laws and the humanities allegedly concerned with unique events and hermeneutic methods is a mistake born of a myopic failure to appreciate the pattern seeking that lies at the heart of this inquiry A New History of the Humanities amounts to a persuasive plea to give Panini Valla Bopp and countless other often overlooked intellectual giants their rightful place next to the likes of Galileo Newton and Einstein
