Cosmos of Light Henry Plummer,2013 One of the great visionaries and pioneers of modern architecture Le Corbusier was a master of light declaring it both a fundamental basis of architecture and the key to personal well being In this portfolio of 160 photographs taken over 40 years Henry Plummer captures Le Corbusier s inspired use of natural light in three of his greatest achievements the small pilgrimage chapel at Ronchamp the Dominican monastery of Sainte Marie de La Tourette and the parish church of Saint Pierre in Firminy Vert all in France In these modest religious works Le Corbusier deploys light to create enchanted emotionally charged spaces wedded to the cosmic rhythm of sunlight and season Cosmos of Light reveals how the artist reimagined sacred space and charted new ways that buildings can both reveal and inhabit the universe around them **Paul Signac and Color in Neo-impressionism** Floyd Ratliff,1992 Paul Signac and Color in Neo Impressionism is a groundbreaking examination of the artistic technique of divisionism in terms of modern scientific theory of color Truly interdisciplinary in his approach Floyd Ratliff treats the evolution of both color theory and artistic practice in an integrated way Signac was the principal advocate for the new movement launched by Georges Seurat in the 1880s The

book is handsomely illustrated with both Neo Impressionist paintings and scientific drawings and diagrams Ratliff's five part essay provides an extended introduction to a translation of Signac's monograph *From Eugene Delacroix to Neo Impressionism* widely regarded as the basic document of the movement but never before available in English This will be an invaluable reference for scholars in art and design as well as students of the psychology and neurophysiology of color vision and those interested in the relation between the arts and the sciences Its clarity of style also makes it accessible to the general reader interested in art history painting or the perception of color particularly with its glossary of technical and art terms index and bibliography

Color Theory Made Easy Jim Ames, 1996 Traditional color theory can be confusing to artists especially when they try to use inaccurate color wheels as guides to mixing their colors Now *Color Theory Made Easy* presents an alternative approach that cuts through the tangle of established but contradictory concepts that gives artists a universal theory that really applies to their work Most artists have been taught that red blue and yellow are the primary colors hues that cannot be created from any combination of other colors However as a result of years of study author and artist Jim Ames has concluded that the true primary colors are cyan a greenish blue magenta a violet red and a yellow that does not lean toward either cyan or magenta In *Color Theory Made Easy* Ames explains the importance of these three colors as the basis for all our thinking about color Using friendly clear language and colorful diagrams the author lays the foundation in Chapter 1 for applying his color theory in art He shows that all colors in nature are composed of varying percentages of cyan magenta and yellow Chapter 2 builds on this with a survey of the pigment colors artists actually use Here the author offers an essential education concerning paint selection and he lists currently available tube colors that are the most accurate in terms of the true primaries The final chapter explores color mixing principles based on cyan magenta and yellow and applies these principles through a series of watercolor demonstrations In this illuminating book Jim Ames has broken new ground and given us a workable color theory that is both simple and indispensable
