

Logit and Probit models for Binary choice Model

- There are two types of binary choice modes
 - 1) Logit regression
 - 2) Probit regression
- Nonlinear models for binary response
 - Response probability is a nonlinear function of explanatory variables

$$P(y = 1|x) = G(\beta_0 + \beta_1 x_1 + \dots + \beta_k x_k) = G(x\beta)$$

Probability of a "success" given explanatory variables

A cumulative distribution function $0 < G(z) < 1$ The response probability is thus a function of the explanatory variables x .

Shorthand vector notation: the vector of explanatory variables x also contains the constant of the model.

Selection Bias In Linear Regression Logit And Probit Models:

Understanding Regression Assumptions William D. Berry, 1993-02-25 Through the use of careful explanations and examples Berry shows the reader how to consider whether the assumptions of multiple regression are actually satisfied in a particular research project Beginning with a brief review of the regression assumptions as they are typically presented in textbooks Berry moves on to explore in detail the substantive meaning of each assumption such as lack of measurement error absence of specification error linearity homoscedasticity and lack of autocorrelation Aimed at improving social science applications of regression this volume is a must for every student's and researcher's library

Accounting and Causal Effects Douglas A

Schroeder, 2010-08-12 In this book we synthesize a rich and vast literature on econometric challenges associated with accounting choices and their causal effects Identification and estimation of endogenous causal effects is particularly challenging as observable data are rarely directly linked to the causal effect of interest A common strategy is to employ logically consistent probability assessment via Bayes theorem to connect observable data to the causal effect of interest For example the implications of earnings management as equilibrium reporting behavior is a centerpiece of our explorations Rather than offering recipes or algorithms the book surveys our experiences with accounting and econometrics That is we focus on why rather than how The book can be utilized in a variety of venues On the surface it is geared toward graduate studies and surely this is where its roots lie If we're serious about our studies that is if we tackle interesting and challenging problems then there is a natural progression Our research addresses problems that are not well understood then incorporates them throughout our curricula as our understanding improves and to improve our understanding in other words learning and curriculum development are endogenous For accounting to be a vibrant academic discipline we believe it is essential these issues be confronted in the undergraduate classroom as well as graduate studies We hope we've made some progress with examples which will encourage these developments

Lawrence, 2022-06-07 An overview of recent efforts in the machine learning community to deal with dataset and covariate shift which occurs when test and training inputs and outputs have different distributions Dataset shift is a common problem in predictive modeling that occurs when the joint distribution of inputs and outputs differs between training and test stages Covariate shift a particular case of dataset shift occurs when only the input distribution changes Dataset shift is present in most practical applications for reasons ranging from the bias introduced by experimental design to the irreproducibility of the testing conditions at training time An example is email spam filtering which may fail to recognize spam that differs in form from the spam the automatic filter has been built on Despite this and despite the attention given to the apparently similar problems of semi supervised learning and active learning dataset shift has received relatively little attention in the machine learning community until recently This volume offers an overview of current efforts to deal with dataset and covariate shift The chapters offer a mathematical and philosophical introduction to the problem place dataset shift in relationship to transfer learning transduction local learning active learning and semi supervised learning provide theoretical views of dataset and covariate shift including decision theoretic and Bayesian perspectives and present algorithms for covariate shift Contributors Shai Ben David Steffen Bickel Karsten Borgwardt Michael Brückner David Corfield Amir Globerson Arthur Gretton Lars Kai Hansen Matthias Hein Jiayuan Huang Choon Hui Teo Takafumi Kanamori Klaus Robert Müller Sam Roweis Neil Rubens Tobias Scheffer Marcel Schmittfull Bernhard Schölkopf Hidetoshi Shimodaira Alex Smola Amos Storkey Masashi Sugiyama

Education and Globalization in

Prior to the era of globalization education in Southeast Asia was viewed in the context of the national state and it was deployed in the service of state and nation building and national economic development States monopolized education and public funded centralized education systems were established to teach literacy transmit national cultures and promote social cohesion and to produce literate workers Globalization forces however dramatically impacted in varying ways and degrees the national education systems across the region As states begun to see their citizens as resources to enhance the countries competitiveness in the global market it among other things led to the increasing demand for highly skilled and qualified human capital The accompanying neoliberal ideology led to varying degrees of decentralization privatization and internationalization of education especially of higher education in Southeast Asia The chapters in this volume focus on a number of issues and challenges confronting the education sector in Southeast Asia including i the contrasting language in education policy in Singapore and Malaysia ii the introduction of an English medium private education sector in Malaysia iii the internationalization of Thai higher education iv access and quality issues in the massification of Malaysian higher education v secondary school quality and higher education participation in Indonesia vi equity access and retention in primary school education in Malaysia and vii reforms in the primary and secondary education in Myanmar

Contextual Characteristics in Juvenile Sentencing Rimonda Maroun, 2019-02-25 While there is extensive research published concerning juvenile justice and sentencing most of the research focuses on individual and extra legal factors such as age race and gender with scant attention paid to the impact of macro level factors This book assesses how a specific contextual factor concentrated disadvantage impacts juvenile court outcomes and considers the relevant implications for the current state of juvenile justice processing Using case level data from a Southern state with a large diverse population and contextual level data from the 2010 US Census and American Community Survey Maroun assesses whether youth living in neighborhoods of concentrated disadvantage experience harsher outcomes than their counterparts from other types of neighborhoods Additionally she examines whether concentrated disadvantage interacts with individual race ethnicity to influence juvenile court outcomes Results suggested a direct impact of concentrated disadvantage on diversion adjudication and probation type Further race significantly interacted with concentrated disadvantage in impacting adjudication and probation outcomes while ethnicity significantly interacted with concentrated disadvantage in impacting disposition and commitment type This research expands the knowledge of macrolevel influences on juvenile court outcomes providing support for the notion that community context impacts juvenile justice processing Results also highlight the fact that judges use discretion as well as other legal and extralegal factors in exerting social control and do so differently at each stage of processing This monograph is essential reading for those engaged in youth and juvenile justice efforts and scholars interested in issues surrounding race class social policy and justice

Deterrence by Diplomacy Anne E. Sartori, 2013-10-24 Why are countries often able to

communicate critical information using diplomacy Why do countries typically use diplomacy honestly despite incentives to bluff Why are they often able to deter attacks using merely verbal threats International relations theory is largely pessimistic about the prospects for effective diplomacy yet leaders nevertheless expend much time and energy trying to resolve conflicts through verbal negotiations and public statements Deterrence by Diplomacy challenges standard understandings of deterrence by analyzing it as a form of talk and reaches conclusions about the effectiveness of diplomacy that are much more optimistic Anne Sartori argues that diplomacy works precisely because it is so valuable States take pains to use diplomacy honestly most of the time because doing so allows them to maintain reputations for honesty which in turn enhance their ability to resolve future disputes using diplomacy rather than force So to maintain the effectiveness of their diplomacy states sometimes acquiesce to others demands when they might have been able to attain their goals through bluffs Sartori theorizes that countries obtain a trade of issues over time they get their way more often when they deem the issues more important and concede more often when they deem the issues less important Departing from traditional theory this book shows that rather than always fighting over small issues to show resolve states can make their threats more credible by sometimes honestly acquiescing over lesser issues by not crying wolf

In Time of War Adam J. Berinsky, 2009-10-15 From World War II to

the war in Iraq periods of international conflict seem like unique moments in U S political history but when it comes to public opinion they are not To make this groundbreaking revelation In Time of War explodes conventional wisdom about American reactions to World War II as well as the more recent conflicts in Korea Vietnam the Gulf Afghanistan and Iraq Adam Berinsky argues that public response to these crises has been shaped less by their defining characteristics such as what they cost in lives and resources than by the same political interests and group affiliations that influence our ideas about domestic issues With the help of World War II era survey data that had gone virtually untouched for the past sixty years Berinsky begins by disproving the myth of the good war that Americans all fell in line to support after the Japanese bombed Pearl Harbor The attack he reveals did not significantly alter public opinion but merely punctuated interventionist sentiment that had already risen in response to the ways that political leaders at home had framed the fighting abroad Weaving his findings into the first general theory of the factors that shape American wartime opinion Berinsky also sheds new light on our reactions to other crises He shows for example that our attitudes toward restricted civil liberties during Vietnam and after 9 11 stemmed from the same kinds of judgments we make during times of peace With Iraq and Afghanistan now competing for attention with urgent issues within the United States In Time of War offers a timely reminder of the full extent to which foreign and domestic politics profoundly influence and ultimately illuminate each other

Fullerton, Jun Xu, 2016-04-21 Ordered Regression Models Parallel Partial and Non Parallel Alternatives presents regression models for ordinal outcomes which are variables that have ordered categories but unknown spacing between the categories The book provides comprehensive coverage of the three major classes of ordered regression models cumulative stage and adjacent as well as variations based on the application of the parallel regression assumption The authors first introduce the three parallel ordered regression models before covering unconstrained partial constrained partial and nonparallel models They then review existing tests for the parallel regression assumption propose new variations of several tests and discuss important practical concerns related to tests of the parallel regression assumption The book also describes extensions of ordered regression models including heterogeneous choice models multilevel ordered models and the Bayesian approach to ordered regression models Some chapters include brief examples using Stata and R This book offers a conceptual framework for understanding ordered regression models based on the probability of interest and the application of the parallel regression assumption It demonstrates the usefulness of numerous modeling alternatives showing you how to select the most appropriate model given the type of ordinal outcome and restrictiveness of the parallel assumption for each variable Web Resource More detailed examples are available on a supplementary website The site also contains JAGS R and Stata codes to estimate the models along with syntax to reproduce the results
