

The Signal and the Noise: Why So Many Predictions Fail--but Some Don't

UPDATED FOR 2020 WITH A NEW PREFACE BY NATE SILVER One of the more momentous books of the decade.

• The New York Times Book Review Nate Silver built an innovative system for predicting baseball performance, predicted the 2008 election within a hair's breadth, and became a national sensation as a blogger• all by the time he was thirty. He solidified his standing as the nation's foremost political forecaster with his near perfect prediction of the 2012 election. • Silver is the founder and editor in chief • of the website FiveThirtyEight. •

• Drawing on his own groundbreaking work, Silver examines the world of prediction, investigating how we can distinguish a true signal from a universe of noisy data. Most predictions fail, often at great cost to society, because most of us have a poor understanding of probability and uncertainty. Both experts and laypeople mistake more confident predictions for more accurate ones. But overconfidence is often the reason for failure. If our appreciation of uncertainty improves, our predictions can get better too. This is the "prediction paradox": The more humility we have about our ability to make predictions, the more successful we can be in planning for the future. In keeping with his own aim to seek truth from data, Silver visits the most successful forecasters in a range of areas, from hurricanes to baseball to global pandemics, from the poker table to the stock market, from Capitol Hill to the NBA. He explains and evaluates how these forecasters think and what bonds they share. What lies behind their success? Are they good• or just lucky? What patterns have they unraveled? And are their forecasts really

Digital new deal: the quest for a natural law in a digital society Riccardo Genghini, 2021-06-08 The quest for a natural law that can be applied to a digital society may sound like an oxymoron but it is a necessary quest if we hope to institute a Digital New Deal Hence the title of this book Today once again mass media is disrupting society much as radio and cinema were used to buttress totalitarianism in the 1920s or even worse in the 15th century when the printing of the Bible unleashed 100 years of war plague and instability Things get messy when people disagree on facts rather than ideas Natural law springs from the features of the physical world which contains boundaries an inside and an outside limited resources living individuals objects living animals living plants climate the four elements etc None of this is a given in the digital world which looks today like feudalism in a box with fire walled communities run by unelected autocrats system administrators ruling over countless subjects whose identities are tied to the domain of the fire walled community and whose rights can only be enforced by the autocratic system administrator This

dystopic reality is neither necessary nor inevitable It is the consequence of bad technical design and inappropriate business models which are destroying the spirit of free pluralism that enabled them to thrive in the first place Information technology has its own ontology and natural rules and we must understand them and learn to regard them as being among the founding legal principles of our free open pluralistic societies Of the 12 founding digital principles addressed here the most important may well be that we must each own and control our digital identities In the world created by information technology everyone and everything should possess a UID a unique identifier Without one we are just helpless particles lost in a dark and hostile universe
