equation of fluid motion energy flux equation Navier Stokes equations from the observer point of view and solve classic problem for this interpretation of fluid motion laws If we have a piece of metal or a volume of liquid the idea impresses itself upon us that it is divisible without limit that any part of it however small would again have the same properties But wherever the methods of research in the physics of matter were refined sufficiently limits to divisibility were reached that are not due to the inadequacy of our experiments but to the nature of the subject matter Observability in mathematics were developed by the author based on denial of infinity idea He introduces observers into arithmetic and arithmetic becomes dependent on observers And after that the basic mathematical parts also become dependent on observers This approach permits to reconsider the fluid motion laws analyze them and get solutions of classic problems
