Hybrids, Super Soldiers & the Coming Genetic Apocalypse Vol.1 Billy Crone,2020-04-02 What if I were to tell you that virtually every plant species known to mankind is on the verge of going out of existence Then what if I were to inform you that all the animals on planet earth as we know them today are being genetically altered in ways that will have dreadful irreversible side effects Back cover

Consumer Genetic Technologies I. Glenn Cohen,Nita A. Farahany,Henry T. Greely,Carmel Shachar,2021-09-16 Examines the ethical legal and regulatory challenges presented as genomics become commonplace easily available consumer products

Examining the Causal Relationship Between Genes, Epigenetics, and Human Health Wambuguh, Oscar J.,2019-03-22 For as much as we know about DNA and gene expression many more mysteries remain to be solved Epigenetics and epigenomics seek to study heritable modifications in gene expression that do not involve underlying DNA sequences to further human health changes Examining the Causal Relationship Between Genes Epigenetics and Human Health provides innovative research methods and applications of chemical activation or deactivation of genes without altering the original DNA sequence While highlighting topics including gene expression personalized medicine and public policy this book is ideal for researchers geneticists biologists medical professionals students and academics seeking current research on the expanding fields of genomics epigenomics proteomics pharmacogenomics and genome wide association studies

Made in China Jasper Becker,2021-12-01 A fascinating account of how China released a deadly virus as a consequence of its biowarfare research and attempts to overtake Western big pharma

Gmo Sapiens: The Life-changing Science Of Designer Babies Paul Knoepfler,2015-11-26 This book won the INDIEFAB 2015 Bronze Award for Science Adult nonfiction Genetically modified organisms GMOs including plants and the foods made from them are a hot topic of debate today but soon related technology could go much further and literally change what it means to be human Scientists are on the verge of being able to create people who are GMOs Should they do it Could we become a healthier and better species or might eugenics go viral leading to a real new world of genetic dystopia GMO Sapiens tackles such questions by taking a fresh look at the cutting edge biotech discoveries that have made genetically modified people possible Bioengineering genomics synthetic biology and stem cells are changing sci fi into reality before our eyes This book will capture your imagination with its clear approachable writing style It will draw you into the fascinating discussion of the life changing science of human genetic modification

God-Given or Bust Cheryl K. Chumley,2025-01-14 In America either rights come from God or they don t This is the ultimate war and God Given or Bust tells how patriots can win American exceptionalism is rooted in the idea that individual rights come from God and government is only in place to preserve and protect those rights But America s losing sight of that

concept America's turning into a country where the government grants rights and privileges to only those the government deems worthy and takes them from those it deems unworthy This is not how the Founding Fathers envisioned the nation this is not how the concept of inalienable rights coming from a Creator works Rather this is how Marxism communism and collectivism spread If we want a nation that's free for generations to come then we must reclaim the notion of God given and ditch the idea of government granted The only way to do that is for Americans of faith to rise up and inject biblical values and godly principles into government culture and society and put God once again at the center It's time to demand the God given or the great American experiment will come to an end

The Artifice of Intelligence Noreen Herzfeld, 2023-02-28 AI is becoming ubiquitous Whatever its arrival portends for our future whether riches or ruin it cannot be avoided The Artifice of Intelligence explores two questions at the heart of a theological response to AI Is it possible for human beings to have authentic relationships with an AI How does the increasing presence of AI change the way humans relate to one another In pursuing answers to these questions Herzfeld explores what it means to be created in the image of God and to create AI in our own image It utilizes and expands Karl Barth's relational understanding of the imago Dei to examine humanity's relationship both with AI and through it with one another Barth's injunctions look the other in the eye embodiment speak to and hear the other communication aid the other agency and do it gladly emotion provide the basis for the main chapters each of which concludes with a case study of a current AI application that exemplifies the difficulties AI introduces into human relationality The Artifice of Intelligence concludes with an examination of the incarnation one that points toward the centrality of embodiment for full relationality

Gene-Edited Crops Aftab Ahmad, Nayla Munawar, Baohong Zhang, 2025-06-30 CRISPR based genome editing has revolutionized the precise genetic improvement of agriculturally important crops offering unprecedented precision and efficiency in crop improvement This powerful technology holds immense potential to reshape the future of food security enabling scientists and agriculturalists to develop resilient high yield crops resistant to diseases pests and environmental stresses Gene Edited Crops The CRISPR Solution for Global Food Security offers a comprehensive guide to the latest research advancements and real world applications of CRISPR in crop genetic improvement for sustainable agriculture and food security Through in depth chapters this book provides an accessible yet rigorous exploration of CRISPR technology CRISPR reagents and their potential delivery methods recent developments in CRISPR and its transformative role in agriculture and food security With a focus on practical implementation and future potential this book examines the science behind genome editing and the strategic pathways to address key challenges in crop development from enhancing nutritional profiles to improving environmental adaptability Features include Comprehensive overview An introduction to the fundamentals of CRISPR technology and its application in crop science Computational tools and CRISPR reagents Bioinformatic tools for designing precise gRNA CRISPR reagents and their effective delivery methods Recent developments in CRISPR Emerging developments in CRISPR for precise gene editing

in plants such as base editing prime editing Fanzor and multiplex gene editing Real world applications Application of CRISPR for developing future crops including projects targeting enhanced disease resistance drought tolerance and improved nutritional content Regulatory landscape Insightful discussion on the evolving global regulatory framework governing gene edited crops including the transformative role of artificial intelligence in navigating these regulations Future directions Exploration of ongoing advances and the outlook for CRISPR technology in addressing food security With detailed examples data and resources this book serves as an essential reference for scientists agriculturalists and policymakers invested in the future of food security It also doubles as an educational resource for advanced courses in genetics plant sciences and agricultural biotechnology making it invaluable to both seasoned researchers and those newly interested in the potential of CRISPR

Advanced Fermentation and Cell Technology Byong H. Lee, 2021-10-25 ADVANCED FERMENTATION AND CELL TECHNOLOGY A comprehensive and up to date reference covering both conventional and novel industrial fermentation technologies and their applications Fermentation and cell culture technologies encompass more than the conventional microbial and enzyme systems used in the agri food biochemical bioenergy and pharmaceutical industries New technologies such as genetic engineering systems biology protein engineering and mammalian cell and plant cell systems are expanding rapidly as is the demand for sustainable production of bioingredients drugs bioenergy and biomaterials As the growing biobased economy drives innovation industrial practitioners instructors researchers and students must keep pace with the development and application of novel fermentation processes and a variety of cell technologies Advanced Fermentation and Cell Technology provides a balanced and comprehensive overview of the microbial mammalian and plant cell technologies used by the modern biochemical process industry to develop new and improved processes and products This authoritative volume covers the essential features of advanced fermentation and cell technology and highlights the interaction of food fermentation and cell culture biopharmaceutical actives Detailed chapters organized into five sections cover microbial cell technology animal and plant cell technology safety issues of new biotechnologies and applications of microbial fermentation to food products chemicals and pharmaceuticals Written by an internationally recognized expert in food biotechnology this comprehensive volume Covers both conventional and novel industrial fermentation technologies and their applications in a range of industries Discusses current progress in novel fermentation cell culture commercial recombinant bioproducts technologies Includes overviews of the global market size of bioproducts and the fundamentals of cell technology Highlights the importance of sustainability Good Manufacturing Practices GMP quality assurance and regulatory practices Explores microbial cell technology and culture tools and techniques such as genome shuffling and recombinant DNA technology RNA interference and CRISPR technology molecular thermodynamics protein engineering proteomics and bioinformatics and synthetic biology Advanced Fermentation and Cell Technology is an ideal resource for students of food science biotechnology microbiology agricultural sciences biochemical engineering and biochemistry and is a

valuable reference for food scientists researchers and technologists throughout the food industry particularly the dairy bakery and fermented beverage sectors

The CRISPR/Cas Tool Kit for Genome Editing Aftab Ahmad, Sultan Habibullah Khan, Zulqurnain Khan, 2022-01-01 This book discusses CRISPR Cas one of the most powerful tools available to scientists for genome editing CRISPR Cas is not only a genome editing tool but researchers have also engineered it for gene regulation genome imaging base editing and epigenome regulations This book describes the entire toolkit for CRISPR Cas The opening section gives an introduction to the technique and compares it with other genome editing tools Further section gives a historical perspective of the tool along with its detailed classification The next chapters describe bioinformatic tools in CRISPR Cas and delivery methods for CRISPR Cas The book also discusses about the applications of CRISPR Cas beyond genome editing and use of CRISPR for rewriting genetic codes The book dedicates a section to the use of CRISPR in plants The book culminates with a chapter on the current status challenges and shortcomings of the CRISPR Cas genome editing tool The book would be highly interesting to students and researchers in molecular biology biochemistry biotechnology food science agriculture and plant sciences

CRISPRized Horticulture Crops Kamel A Abd-Elsalam, Aftab Ahmad, Baohong Zhang, 2024-03-19 CRISPRized Horticultural Crops Genome Modified Plants and Microbes in Food and Agriculture summarizes applications of CRISPR Cas systems and its advanced variants e g CRISPR Cpf1 base editing and prime editing for precise editing of horticultural crops The book discusses vector transformations methods epi genome deep learning synthetic biology and precision breeding for improving yield and quality related attributes in horticultural crops With coverage of the relevant technologies and their applications the book also includes bioinformatics and large scale databases and their potential application in fruits vegetables and ornamental plants and sections on regulatory concerns related to CRISPR edited crops Horticultural crops including fruit vegetable and ornamental plants are an important component of agriculture production systems and play an important role in sustaining human life Reviews CRISPR for editing horticultural crops Discusses vector transformation methods epigenome deep learning synthetic biology and precision breeding Includes bioinformatics and large scale databases Contributes engineering approaches for crop improvement programs

Chemistry and Pharmacology of Anticancer Drugs David E. Thurston, Ilona Pysz, 2021-03-17 While drug therapies developed in the last 80 years have markedly improved treatment outcomes and the management of some types of cancers the lack of effectiveness and side effects associated with the most common treatment types remain unacceptable However recent technological advances are leading to improved therapies based on targeting distinct biological pathways in cancer cells Chemistry and Pharmacology of Anticancer Drugs is a comprehensive survey of all families of anticancer agents and therapeutic approaches currently in use or in advanced stages of clinical trials including biological based therapies The book is unique in providing molecular structures for all anticancer agents discussing them in terms of history of development chemistry mechanism of action structure function relationships and pharmacology It also provides relevant information on

side effects dosing and formulation The authors renowned scientists in cancer research and drug discovery also provide up to date information on the drug discovery process including discussions of new research tools tumor targeting strategies and fundamental concepts in the relatively new areas of precision medicine and chemoprevention Chemistry and Pharmacology of Anticancer Drugs is an indispensable resource for cancer researchers medicinal chemists and other biomedical scientists involved in the development of new anticancer therapies Its breadth of coverage clear explanations and illustrations also make it suitable for undergraduate and postgraduate courses in medicine pharmacy nursing dentistry nutrition the biomedical sciences and related disciplines Key Features Summarizes the fundamental causes of cancer modes of treatment and strategies for cancer drug discovery Brings together a broad spectrum of information relating to the chemistry and pharmacology of all families of anticancer agents and therapies Includes up to date information on cutting edge aspects of cancer treatments such as biomarkers pharmacogenetics and pharmacogenomics Features new chapters on the Evolution of Anticancer Therapies Antibody Based Therapies and Cancer Chemoprevention

Womb Politics: A Short History of the Future of Human Reproduction Frida Simonstein, 2022-10-15 This book offers a vision of politics that govern the womb from antiquity be fertile and replenish the earth through the ages hysterectomy to extirpate women s hysteria up to the present time abortion wars assisted reproduction and into the future reprogenetics the artificial womb It explores how the womb has served humanity either tacitly or explicitly through the ages and examines how women have accepted and still perceive the rules created by men as natural including the new anti abortion laws in the USA because that is the way things are The book also explores how the emerging of assisted reproduction technologies and novel genetic tools reprogenetics will pose additional challenges to womb bearers as all women will be made to reproduce with IVF What is more the advent of the artificial womb is in sight the gender and social implications of this development would be enormous Certainly not just another organ the womb has been and remains a powerful tool that cannot be left to the decisions of half of the population This book engages a wide audience including women and men professionals and laypersons who are interested in gender politics legislation women s health and ethics

The Unnatural Selection of Our Species Torill Kornfeldt, 2024-07-09 In 2018 the first genetically modified children were born Now we have the tools to reshape the future of our species With a pair of genetic scissors known as CRISPR we can select the traits of our children avoid ageing or cure disease With that ability comes new risks forcing us to face hard ethical questions Torill Kornfeldt has travelled the world to meet the people driving this research forward She has visited fertility clinics in South Korea oncologists in China who are experimenting on sick patients and biohackers in the US who want to make the new technology available to everyone In The Unnatural Selection of Our Species she asks How can we handle these new tools that could change our genetic material Well written knowledgeable and engaging exactly how really good popular science is supposed to be Gustav K Ilstrand Nobel Centre Torill Kornfeldt is a Swedish science journalist with a background in biology She has worked in the science department of Sweden s leading

morning newspaper Dagens Nyheter and at the science branch of the Swedish public radio There she created the successful radio show Tekniksafari Tech Safari on new technology changing society Her main focus is on how emerging bioengineering and technology will shape our future

Defense Against Biological Attacks Sunit K. Singh, Jens H. Kuhn, 2019-03-30 This first volume of a two volume set describes general aspects such as the historical view on the topic the role of information distribution and preparedness of health care systems and preparedness in emergency cases Part two describes and discusses in detail the pathogens and toxins that are potentially used for biological attacks As such the book is a valuable resource for faculties engaged in molecular biology genetic engineering neurology biodefense biosafety biosecurity virology and infectious disease programs as well as professional medical research organizations

Genome Editing and Global Food Security Zeba Khan, Durre Shahwar, Yasmin Heikal, 2023-09-26 With the rapid increase in the global population and changing climatic impacts on agriculture this book demonstrates how genome editing will be an indispensable technique to overcome ongoing and prospective agricultural challenges This book examines the role of genome editing in improving crop yields and contributing to global food security It summarizes a range of genome editing techniques and discusses the roles they can play in producing a new generation of high yielding climate ready crops This includes site specific nucleases precision genome engineering clustered regularly interspaced short palindromic repeats and bioinformatics It showcases how these gene editing techniques can tailor plants to not only increase yield related traits but to also make them better suited to their environment and to be resistant to pests and extreme climatic events such as droughts The book also examines genome editing regulations and policies the commercialization of genome edited crops and biosafety and biosecurity concerns Overall this book reveals and showcases how genome editing can improve crop resilience and production to address current and future agricultural challenges and alleviation of global food security concerns This book will be of great interest to students and scholars of agricultural science crop and plant science genome editing sustainable agriculture biotechnology and food security

The Masters of Medicine Andrew Lam, 2023-04-18 An in depth look at the mavericks moments and mistakes that sparked the greatest medical discoveries in modern times plus the cures that will help us live longer and healthier lives in this century and beyond Human history hinges on the battle to confront our most dangerous enemies the half dozen diseases responsible for killing almost all of mankind And while the story of our triumphs over these afflictions reveals an inspiring tapestry of human achievement the journey was far from smooth In *The Masters of Medicine* Dr Andrew Lam distills the long arc of medical progress down to the crucial moments that were responsible for the world's greatest medical miracles Discover fascinating true stories of scientists and doctors throughout history including Rival surgeons who killed patient after patient in their race to operate on beating hearts and put us on the path toward the heart transplant A quartet of Canadians whose miraculous discovery of insulin was marred by jealousy and resentment The doctors who discovered penicillin but were robbed of the credit The feud between two Americans in the quest for the polio vaccine A New York surgeon whose

heretical idea to cure patients by deliberately infecting them has now inspired our next best hope to defeat cancer A Hungarian doctor who solved the greatest mystery of maternal deaths in childbirth only to be ostracized for his discovery The Masters of Medicine is a fascinating chronicle of human courage audacity error and luck This riveting ode to mankind reveals why the past is prelude to the game changing breakthroughs of tomorrow Applying large animals for developmental study and disease modeling Yongye Huang,Jacek Z. Kubiak,Lin Yuan,Sen Wu,Feng Yue,2023-06-21 *Handbook of Bioethical Decisions. Volume I* Erick Valdés,Juan Alberto Lecaros,2023-06-14 The Handbook of Bioethical Decisions is aimed at addressing and analyzing the most important ethical concerns and moral quandaries arisen in biomedical and scientific research As such it identifies and problematizes on a comprehensive range of ethical issues researchers must deal with in different critical contexts Thus the Handbook Vol I may be helpful for them to make decisions and deliberate in complex practical scenarios In this fashion the volume reunites different points of view to give readers room enough to get a better knowledge and take their own position on pressing bioethical issues of the day Consequently this work seeks to engender dense ethical epistemology scientists can count on when conducting latest generation biomedical research By bringing together an impressive array of contributions on the most important elements and categories for at the bench bioethical decisions as well as offering chapters by some of the most world renowned and prominent experts in bioethics the Handbook Vol I is a paradigmatic text in its area and a valuable resource for courses on bioethics and biomedical research as well as courses that discuss ethics and the biosciences at different professional levels biomedical industry pharmacological companies and the public sphere in general

Whispering the Secrets of Language: An Psychological Journey through **Scientists In China Used Crispr To Genetically Modify Low**

In a digitally-driven world wherever monitors reign great and immediate interaction drowns out the subtleties of language, the profound strategies and emotional nuances concealed within phrases often get unheard. Yet, situated within the pages of **Scientists In China Used Crispr To Genetically Modify Low** a charming literary value pulsing with fresh feelings, lies a fantastic quest waiting to be undertaken. Written by a skilled wordsmith, this enchanting opus encourages visitors on an introspective trip, delicately unraveling the veiled truths and profound impact resonating within the material of every word. Within the psychological depths of the poignant evaluation, we can embark upon a genuine exploration of the book is primary themes, dissect its charming writing model, and succumb to the strong resonance it evokes heavy within the recesses of readers hearts.
