Urban Design Jon Lang, 1994 *Urban Design the American Experience* Jon Lang *Urban Design The American Experience* places social and environmental concerns within the context of American history It returns the focus of urban design to the creation of a better world It evaluates the efforts of designers who apply knowledge about the environment and people to the creation of livable enjoyable and even inspiring built worlds *Urban Design The American Experience* emphasizes that urban design must take a user oriented approach to achieve a higher quality of life in human settlements All the keys to this approach are spelled out in chapters that address Urban design as both a product and process of communal decision making Types of knowledge required as a base for urban design action How to apply recent environmental and behavioral research to professional design How human needs are fulfilled through design The true role of functionalism in design Urban design efforts of the twentieth century in the United States are examined within their socio political context Jon Lang reviews the urban design experience from the beginning of the City Beautiful movement paying particular attention to developments since World War II He explores how the twentieth century city has developed as well as discusses the attitudes that have driven major movements in urban design Readers learn a neo Modernist approach that builds on the successes and failures of Rationalism and Empiricism the two major streams of

Modernist thought in architecture and urban design They also gain an understanding of how the environment is experienced by people and the implications of this experiencing for architectural and urban design Numerous illustrations throughout demonstrate how various design schemes can be used Urban Design The American Experience provides architects designers city planners and students in these fields with a model for their own future development as professionals It is a valuable guide to design methodology procedural theory and other issues related to creating optimal urban environments Design Guidelines for Downtown Shopping Centers Billy Kevin McGhee,1987 This thesis focuses on urban design issues germane to downtown shopping center design The underlying concept is that all new downtown shopping centers should attempt to build upon the existing fabric in such a way as to become an integral part of the city This study first examines the nature of retail districts the shopping center as a building type and the recent emergence of the downtown shopping center Two recently constructed downtown centers will be reviewed to uncover urban design concerns that are pertinent to the conceptual design of shopping centers in the context of downtowns The intent of this study is to formulate design guidelines that address the problems of implementing this suburban retail model in the context of a downtown These guidelines are then applied to a specific site in the form of a sketch problem This study concludes with an evaluation of the guidelines and some recommendations for designing shopping places that are conceived as an integral part of the city *Street-Level Architecture* Conrad Kickert,Hans Karssenberg,2022-08-04 This book provides the tools to maintain and rebuild the interaction between architecture and public space Despite the best intentions of designers and planners interactive frontages have dwindled over the past century in Europe and North America This book demonstrates why even our best intentions for interactive frontages are currently unable to turn a swelling tide of economic and technological evolution land consolidation introversion stratification and contagious decline It uses these lessons to offer concrete locational programming design and management strategies to maximize street level interaction and trust between street level architecture its inhabitants and the city This book demonstrates that designers developers planners and managers ultimately have to create the right preconditions for inhabitants and passersby to bring frontages to life These preconditions connect architecture to its urban social economical and technological context Only the right frontage in the right context with the right design the right inhabitation and the right attitude to the city will become part of the ecosystem of trust and interaction that supports public life This book empowers the many participants in this ecosystem to build inhabit and enjoy truly urbane architecture
