Performance Measurement in Textile Enterprises Pranav C. Charkha, Santosh B. Jaju, Prasenjit Chatterjee, 2024-06-28
This new volume provides detailed insight into supply chain management (SCM) and supply chain performance measurement (SCPM) in the textile industry. The book provides a comprehensive set of performance sub-criteria for the evaluation of SCPM, offering the information needed to understand, implement, and evaluate the supply chain performance of the textile industry and its cyclic processes. Using the Delphi method, a process used to arrive at a group opinion or decision by surveying a panel of experts, the authors studied several companies of diverse sizes and applied an analytical hierarchy process to establish crucial performance measurement criteria and sub-criteria. Around 80 textile industry personnel were contacted, including general managers, factory managers, managers, assistant managers, executives, and supervisors involved in various functions related to textile supply chains, to discuss procurement, production, and distribution alternatives. The authors employed the multi-criteria decision-making technique, i.e., analytical hierarchy process, for executing pairwise comparison and establishing priority weights of criteria, sub-criteria, and for estimating the contribution of supply chain cyclic processes to overall supply chain performance. **NEERI Annual Report** National Environmental Engineering Research Institute, 2009

AI-Driven Innovations in the Insurance Sector B.R., Manjunath, Sahrawat, Munish, Kaul, B.K., 2025-10-10
Artificial intelligence (AI) revolutionizes the insurance sector, driving innovations that reshape how insurers assess risks, process claims, detect fraud, and communicate with customers. From advanced data analytics and machine learning algorithms to chatbots and predictive modeling, AI technologies enhance operational efficiency and enable more personalized, proactive services. As insurers leverage these tools to gain competitive advantages and streamline decision-making, they navigate challenges related to data privacy and regulatory compliance. This shift reveals a new era in insurance where digital intelligence plays a role in strategy and service delivery. **AI-Driven Innovations in the Insurance Sector** delves into the transformative role of AI in reshaping the insurance industry. It examines how these innovations enhance operational workflows, improve risk assessment, streamline claims processing, and elevate customer experiences. This book covers topics such as human resources, chatbots, and risk management and is a useful resource for business owners, computer engineers, academicians, researchers, and data scientists.
