Protein Subcellular Location The life sciences have entered the post genome era where the focus of biological research has shifted from genome sequence to protein functionality. With whole genome drafts of mouse and human in hand, scientists are putting more and more effort into obtaining information about the entire proteome in a given cell type. The properties of a protein include its amino acid sequences, its expression levels under various developmental stages and in different tissues, its 3D structure and active sites, its functional and structural binding partners, and its subcellular location. Protein subcellular location is important for understanding protein function inside the cell. For example, the observation that the product of a gene is localized in mitochondria will support the hypothesis that this protein or gene is involved in energy metabolism. Proteins localized in the cytoskeleton are probably involved in intracellular tracking and support. The context of protein functionality is well represented by protein subcellular location. Proteins have various subcellular location patterns. 250 One major category of proteins is synthesized on free ribosomes in the cytoplasm. Soluble proteins remain in the cytoplasm after their synthesis and function as small factories catalyzing cellular metabolites. Other proteins that have a target signal in their sequences are directed to their target organelle such as mitochondria via posttranslational transport through the organelle membrane. Nuclear proteins are transferred through pores on the nuclear envelope to the nucleus and mostly function as regulators. The second major category of proteins is synthesized on endoplasmic reticulum (ER) associated ribosomes and passes through the reticuloendothelial system consisting of the ER and the Golgi apparatus. **Resources in Education**, 1999-10 Microsoft Encarta College Dictionary Anne H. **The Software Catalog** MENU Staff, Menu, 1987 **The Vanishing of Flight MH370** Richard Quest, 2016-03-08 CNN Aviation Correspondent Richard Quest offers a gripping and definitive account of the disappearance of Malaysian Airlines Flight MH370 in March 2014. On March 8, 2014, Malaysian Airlines Flight MH370 disappeared with barely a trace, carrying 239 people on board, seemingly vanishing into the dark night. The airplane's whereabouts and fate would quickly become one of the biggest aviation mysteries of our time. Richard Quest, CNN's Aviation Correspondent, was one of the leading journalists covering the story. In a coincidence, Quest had interviewed one of the two pilots a few weeks before the disappearance. It is here that he begins his gripping account of those tense weeks in March, presenting a fascinating chronicle of an international search effort which, despite years of searching and tens of millions of dollars spent, has failed to find the plane. Quest dissects what happened in the hours following the plane's disappearance and chronicles the days and weeks of searching which led to nothing but increasing despair. He takes apart the varying responses from authorities and the discrepancies in reports, the

wide range of theories the startling fact that the plane actually turned around and flew in the opposite direction and what solutions the aviation industry must now implement to ensure it never happens again What emerges is a riveting chronicle of a tragedy that continues to baffle everyone from aviation experts to satellite engineers to politicians and which to this day worries the traveling public that it could happen again INCLUDES PHOTOS Conference Record ,1987 **Singapore Medical Journal** ,1960 *The Software Catalog* ,1984 **Government Reports Announcements & Index** ,1990 **ESA Newsletter** ,1997 Second Language Instruction/acquisition Abstracts ,1997 **Records of the Geological Survey of India** Geological Survey of India,1998 1867 includes the Annual report of the Geological survey of India
