Simulation-based Optimization of Energy Efficiency in Production Anna Carina Römer,2021-02-11 The importance of the energy and commodity markets has steadily increased since the first oil crisis The sustained use of energy and other resources has become a basic requirement for a company to competitively perform on the market The modeling analysis and assessment of dynamic production processes is often performed using simulation software While existing approaches mainly focus on the consideration of resource consumption variables based on metrologically collected data on operating states the aim of this work is to depict the energy consumption of production plants through the utilization of a continuous simulation approach in combination with a discrete approach for the modeling of material flows and supporting logistic processes The complex interactions between the material flow and the energy usage in production can thus be simulated closer to reality especially the depiction of energy consumption peaks becomes possible An essential step towards reducing energy consumption in production is the optimization of the energy use of non value adding production phases

Emerging Solutions for Future Manufacturing Systems Luis M. Camarinha-Matos, 2006-01-04 Industries and particularly the manufacturing sector have been facing difficult challenges in a context of socio economic turbulence characterized by complexity as well as the speed of change in causal interconnections in the socio economic environment In order to respond to these challenges companies are forced to seek new technological and organizational solutions In this context two main characteristics emerge as key properties of a modern automation system agility and distribution Agility because systems need not only to be flexible in order to adjust to a number of a priori defined scenarios but rather must cope with unpredictability Distribution in the

sense that automation and business processes are becoming distributed and supported by collaborative networks Emerging Solutions for Future Manufacturing Systems includes the papers selected for the BASYS 04 conference which was held in Vienna Austria in September 2004 and sponsored by the International Federation for Information Processing IFIP

Alleman,Jon M. Quigley,2024-03-15 Project success is an elusive goal in every business or technical domain Project failure usually results from unhandled risks to the technical cost and schedule aspects of the project There are four primary root causes of project failure Unrealistic performance expectation with missing Measures of Effectiveness Unrealistic cost and schedule estimates based on inadequate risk adjusted growth models Inadequate assessment of risk and unmitigated exposure to these risks without proper handling strategies Unanticipated technical issues with alternative plans and solutions to maintain the effectiveness of the project processes and its deliverables Risk Management provides a comprehensive overview of the people principles processes and practices as the fundamental base upon which an effective risk management system resides However this does not guarantee effective risk management and successful projects and businesses The first half of the book describes risk management processes as well as a delineation between risk and hazards and how these are connected The second half of the book provides industry examples of the approach to risk management in specific context and with specific approaches and artifacts where applicable The book focuses on risks created by uncertainty their identification and the corrective and preventive actions needed to address these risks to increase the probability of project success The book s goal is to provide a context driven framework developing a foundation for a rational approach to risk management that makes adaptation to circumstances as easy as possible **Glocalized Solutions for Sustainability in Manufacturing** Jürgen Hesselbach,Christoph Herrmann,2011-03-19 The 18th CIRP International Conference on Life Cycle Engineering LCE 2011 continues a long tradition of scientific meetings focusing on the exchange of industrial and academic knowledge and experiences in life cycle assessment product development sustainable manufacturing and end of life management The theme

Glocalized Solutions for Sustainability in Manufacturing addresses the need for engineers to develop solutions which have the potential to address global challenges by providing products services and processes taking into account local capabilities and constraints to achieve an economically socially and environmentally sustainable society in a global perspective Glocalized Solutions for Sustainability in Manufacturing do not only involve products or services that are changed for a local market by simple substitution or the omitting of functions Products and services need to be addressed that ensure a high standard of living everywhere Resources required for manufacturing and use of such products are limited and not evenly distributed in the world Locally available resources local capabilities as well as local constraints have to be drivers for product and process innovations with respect to the entire life cycle The 18th CIRP International Conference on Life Cycle Engineering LCE 2011 serves as a platform for the discussion of the resulting challenges and the collaborative development of new scientific ideas
