Design For Etabs:

Database-assisted Design of High-rise Structures Using ETABS Software Dikshant S. Saini, 2022 This User's Manual is associated with the DAD_ETABS version 1.0 software based on the Database Assisted Design (DAD) procedure for the design of high rise steel buildings for wind used in conjunction with the structural analysis and design program ETABS. For the design of structures for wind, ETABS has so far been used in conjunction with static wind loads specified by building codes or wind engineering laboratories. The marriage of DAD with ETABS significantly enhances the capabilities of both programs. DAD allows the direct use of wind tunnel measurements of time varying pressure coefficients to determine the time dependent wind loading induced by any directional wind speed. Structural and dynamic analyses performed by ETABS determine the dependence of any desired building response (i.e. member Demand to Capacity Indexes, DCI, inter story drift ratios, floor accelerations) on wind speed and direction. Representations of this dependence called response surfaces are properties of the structure independent of wind climate. They are used to transform the matrix of the wind velocities at the building site into response matrices for as many responses as are required for structural design purposes. The elements of a response matrix are responses induced by their counterparts in the wind velocity matrix. For any response being considered, the vector whose components are the largest entry in each row of the response matrix is a data sample of the largest responses induced in the structure by the elements of the wind velocity matrix. The N year response is obtained from that sample by using any appropriate extreme value estimation tool. The DAD_ETABS version 1.0 software was developed for the design of steel prismatic structures with rectangular shapes in plan. The User's Manual includes an example of the application of the software.

Computational Design Rongrong Yu, Ning Gu, Michael J. Ostwald, 2021-07-25 New computational design tools have evolved rapidly and been increasingly applied in the field of design in recent years, complementing and even replacing the traditional design media and approaches. Design, as both the process and product, are changing due to the emergence and adoption of these new technologies. Understanding and assessing the impact of these new computational design environments on design and designers is important for advancing design in the contemporary context. Do these new computational environments support or hinder design creativity? How do those tools facilitate designers thinking? Such knowledge is also important for the future development of design technologies. Research shows that design is never a mysterious, non-understandable process. For example, one general view is that the design process shares a common analysis-synthesis-evaluation model during which designers interact between design problem and solution spaces. Understanding designers thinking in different environments is the key to design research, education, and practice. This book focuses on emerging computational design environments whose impact on design and designers have not been comprehensively and systematically studied. It comprises three parts. The history and recent developments of computational design technologies are introduced in Part I. The main categories of technologies cover from computer-aided drafting and

modelling tools to visual programming and scripting tools for algorithmic design to advanced interfaces and platforms for interactions between designers and computers and between the virtual environment and the physical reality To critically explore design thinking especially in these new computational design environments formal approaches to studying design thinking and design cognition are introduced and compared in Part II drawing on literature and studies from the 70s to the current era Part III concludes the book by exploring the impact of different computational design technologies on design and designers using a series of case studies conducted by the author team building on their close collaboration over the past five years The book offers new insights into designers thinking in the rapidly evolving computational design environments which have not been critically and systematically studied and reported in the current literature The book is meant for design researchers educators and students professional practitioners and consultants as well as people who are interested in computational design in general
