*Strategies of Sustainable Development in China's Wind Power Industry* Jiachun Li, Dexin He, 2020-01-11 This book reviews the status quo and visions for the future in the wind energy industry in China and around the globe focusing on its roles in optimizing energy structure alleviating environmental pollution and coping with climate change Providing a blueprint of wind power development till 2050 it suggests a series of further measures in the context of policies regulations laws and marketing in order to overcome the existing bottlenecks Moreover it proposes a number of potential innovative technologies related to IT and advanced manufacturing including integrated distributed power and micro grid systems multi energy complement green and intelligent manufacturing reliability design blade design manufacturing and maintenance drive train systems and offshore wind farms This book offers researchers and engineers insights into sustainable development in the wind power industry

*Advances in Mechanical Design* Jianrong Tan, 2022-03-15 This book focus on innovation main objectives are to bring the community of researchers in the fields of mechanical design together to exchange and discuss the most recent investigations challenging problems and new trends and to encourage the wider implementation of the advanced design technologies and tools in the world particularly throughout China The theme of 2021 ICMD is Interdisciplinary and Design Innovation and this conference is expected to provide an excellent forum for cross fertilization of ideas so that more general intelligent robust and computationally economical mechanical design methods are created for multi disciplinary applications

**Wind Turbine Aerodynamics** Wen Zhong Shen, 2019-10-04 Wind turbine aerodynamics is one of the central subjects of wind turbine technology To reduce the levelized cost of energy LCOE the size of a single wind turbine has been increased to 12 MW at present with further increases expected in the near future Big wind turbines and their associated wind farms have many advantages but also challenges The typical effects are mainly related to the increase in Reynolds number and blade flexibility This Special Issue is a collection of 21 important research works addressing the aerodynamic challenges appearing in such developments The 21 research papers cover a wide range of problems related to wind turbine aerodynamics which includes atmospheric turbulent flow modeling wind turbine flow modeling wind turbine design wind turbine control wind farm flow modeling in complex terrain wind turbine noise modeling vertical axis wind turbine and offshore wind energy Readers from all over the globe are expected to greatly benefit from this Special Issue collection regarding their own work and the goal of enabling the technological development of new environmentally friendly and cost effective wind energy systems in order to reach the target of 100% energy use from renewable sources worldwide by 2050

*Design Optimization of a Wind Turbine Blade* Bharath Koratagere Srinivasa Raju, 2011 This work focuses on designing a blade of 45 meters in length that produces a power of 1.6 MW The design of the blade was done using the Blade Element Momentum theory and the Prandtl's tip loss factor was used The aerodynamic loads and differential power at are tabulated and plotted The finite element method for analysis of the blade is used As the chord lengths vary decreasingly

along the blade radii in order to use the simple beam theory the breath and height of the blade is considered as a function of the chord length hence the analysis is done assuming the blade to be a tapered hollow beam The first few natural frequencies in the axial and transverse direction and mode shapes are calculated and plotted In order to reduce the weight of the blade designed and increase the power two sets of optimization was done The design variables are the chord lengths with objective function as power mass constraints was used The other optimization was using the mass as objective function and power as the constraint The chord distribution results are plotted and discussed

Research into advanced wind turbine design has shown that load alleviation strategies like bend twist coupled blades and coned rotors could reduce costs However these strategies are based on nonlinear aero structural dynamics providing additional benefits to components beyond the blades These innovations will require Multi disciplinary Design Optimization MDO to realize the full benefits This research expands the MDO capabilities of Horizontal Axis Wind Turbines The early research explored the numerical stability properties of Blade Element Momentum BEM models Then developed a provincial scale wind farm siting models to help engineers determine the optimal design parameters The main focus of this research was to incorporate advanced analysis tools into an aero elastic optimization framework To adequately explore advanced designs with optimization a new set of medium fidelity analysis tools is required These tools need to resolve more of the physics than conventional tools like BEM models and linear beams while being faster than high fidelity techniques like grid based

computational fluid dynamics and shell and brick based finite element models      **Wind Turbine Airfoils and Blades** Jin Chen, Quan Wang, 2017-12-04 Wind Turbine Airfoils and Blades introduces new ideas in the design of wind turbine airfoils and blades based on functional integral theory and the finite element method accompanied by results from wind tunnel testing The authors also discuss the optimization of wind turbine blades as well as results from aerodynamic analysis This book is suitable for researchers and engineers in aeronautics and can be used as a textbook for graduate students
