*Algorithms for Fuzzy Clustering* Sadaaki Miyamoto, Hidetomo Ichihashi, Katsuhiro Honda, 2008-04-10 Recently many researchers are working on cluster analysis as a main tool for exploratory data analysis and data mining A notable feature is that specialists in different fields of sciences are considering the tool of data clustering to be useful A major reason is that clustering algorithms and software are flexible in the sense that different mathematical frameworks are employed in the algorithms and a user can select a suitable method according to his application Moreover clustering algorithms have different outputs ranging from the old dendrograms of agglomerative clustering to more recent self organizing maps Thus a researcher or user can choose an appropriate output suited to his purpose which is another flexibility of the methods of clustering An old and still most popular method is the K means which use K cluster centers A group of data is gathered around a cluster center and thus forms a cluster The main subject of this book is the fuzzy c means proposed by Dunn and Bezdek and their variations including recent studies A main reason why we concentrate on fuzzy c means is that most methodology and application studies in fuzzy clustering use fuzzy c means and fuzzy c means should be considered to be a major technique of clustering in general regardless whether one is interested in fuzzy methods or not Moreover recent advances in clustering techniques are rapid and we require a new textbook that includes recent algorithms We should also note that several books have recently been published but the contents do not include some methods studied herein

*Computational Optimization in Engineering* Hossein Peyvandi, 2017-04-26 The purpose of optimization is to maximize the quality of lives productivity in time as well as interests Therefore optimization is an ongoing challenge for selecting the best possible among many other inferior designs For a hundred years in the past as optimization has been essential to human life several techniques have been developed and utilized Such a development has been one of the long lasting challenges in engineering and science and it is now clear that the optimization goals in many of real life problems are unlikely to be achieved without resource for computational techniques The history of such a development in the optimization techniques starts from the early 1950s and is still in progress Since then the efforts behind this development dedicated by many distinguished scientists mathematicians and engineers have brought us today a level of quality of lives This book concerns with the computational optimization in engineering and techniques to resolve the underlying problems in real life The current book contains studies from scientists and researchers around the world from North America to Europe and from Asia to Australia

Tracking and Mapping of Spatiotemporal Quantities Using Unicellular Swarm Intelligence John Oyekan, 2015-12-18 The book discusses new algorithms capable of searching for tracking mapping and providing a visualization of invisible substances It reports on the realization of a bacterium inspired robotic controller that can be used by an agent to search for any environmental spatial function such as temperature or pollution Using the

parameters of a mathematical model the book shows that it is possible to control the exploration exploitation and sensitivity of the agent This feature sets the work apart from the usual method of applying the bacterium behavior to robotic agents The book also discusses how a computationally tractable multi agent robotic controller was developed and used to track as well as provide a visual map of a spatio temporal distribution of a substance On the one hand this book provides biologists and ecologists with a basis to perform simulations related to how individual organisms respond to spatio temporal factors in their environment as well as predict and analyze the behavior of organisms at a population level On the other hand it offers robotic engineers practical and fresh insights into the development of computationally tractable algorithms for spatial exploratory and mapping robots It also allows a more general audience to gain an understanding of the design of computational intelligence algorithms for autonomous physical systems
