Dengue fever, caused by the dengue virus, is a significant global health concern, with millions of cases reported annually. The absence of specific antiviral treatments or effective preventive measures has fuelled the urgent need for a dengue vaccine. This provides a comprehensive review of the development of a dengue vaccine, summarizing the major milestones, challenges encountered, and recent advancements in this field. This study explores various vaccine strategies employed, including live attenuated vaccines, inactivated vaccines, recombinant subunit vaccines, and viral vector-based vaccines. In addition, the manuscript discusses the clinical trials conducted to evaluate the safety and efficacy of these vaccine candidates.

Introduction

The history of dengue fever, a vector-borne disease caused by the dengue virus and transmitted to human through the bite of infected *Aedes* mosquitoes, is marked by global epidemic outbreaks and substantial

morbidity and mortality rates in tropical and subtropical regions [1-5]. According to the World Health Organization (WHO), there are approximately 390 million dengue infections worldwide each year; this may trigger the development of a vaccine to prevent the spread of virus infection [6]. Global Infectious Diseases David H. Walker,2013-04-17 Introducing a book on global infectious diseases is a daunting challenge Modern developments in molecular research newly available opportuni ties for earth orbiting satellite based surveillance as a means of predicting certain regional epidemics and the introduction of remarkable new anti biotics which can cure some awesome problems such as river blindness would each have astonished even the most jaded reader only a few decades ago Just the same even with these laudable advances malaria is still with us and both poliomyelitis and tuberculosis are growing worldwide problems As a holdover from my own medical school days I must confess to an affection for the older term of tropical medicine and its historic context in preference to the more popular present name which is the title of this book A century or two ago the motives to study tropical medicine were obvious nations having enormous amounts of maritime trade with distant lands established colonial empires where health in the colonies was a con cern for both the natives and the colonists It is unsurprising that the great institutes for such studies sprang up in London Amsterdam Hamburg New York and New Orleans but few of these centers and other similar ones have continued to flourish or even to survive perhaps because the days of empires have gone

Promoting Innovation, Productivity and Industrial Growth and Reducing Poverty Maureen Mackintosh,Joanna Chataway,Marc Wuyts,2021-04-26 Development and the ending of mass poverty require a massive increase in productive capabilities and production in developing countries Some countries notably in Asia are achieving this Yet pro poor aid policies especially for the least developed countries operate largely without reference to policy thinking on the promotion of innovation for productivity growth Conversely policy makers and researchers on innovation and industrial policies tend to know little about the potential for social protection to support innovation and productivity improvement This book aims to focus attention on this gulf between research on innovation and on poverty reduction and to identify some of its policy consequences to set out some ways in which this gulf can be bridged analytically and empirically and to contribute to the

creation of an agenda for further research and an understanding of the urgency of the implied rethinking The first two chapters provide sustained arguments for embedding social policy thinking in much more productivist frameworks of thought that focus on raising productivity and employment and for identifying growth theories that can incorporate satisfactory understandings of innovation and employment upgrading A set of chapters then tackle these broad themes in the context of health addressing the interlinked issues of innovation health inequity and associated impoverishment The final set of chapters examines the challenge of creating industrial policies that generate both innovation and employment using and going beyond concepts of systems of innovation

Neglected Tropical Diseases - Latin America and the Caribbean Carlos Franco-Paredes, José Ignacio Santos-Preciado, 2015-05-08 This book addresses the major neglected tropical diseases NTDs based on their prevalence and the years of healthy life lost to disability in Latin American and Caribbean countries These include Chagas disease leishmaniasis hookworm infection and other soil transmitted helminth infections followed by dengue schistosomiasis leishmaniasis leprosy cysticercosis bartonellosis Plasmodium vivax malaria and onchocerciasis Topics like disease burden major manifestations and approaches to the control and elimination of NTDs in Latin America and the Caribbean are discussed in detail As such the book will be of general interest to basic researchers and clinicians engaged in infectious disease tropical medicine and parasitology and a must have for scientists specialized in the characteristics of this region of the world
