The Culture and Development Manifesto Robert Klitgaard, 2021 With fascinating examples from around the world this inspiring manifesto shows how to account for cultural diversity in reshaping economic and political development Around the world the realities of underdevelopment are harsh and galling and current strategies are not working well enough or quickly enough One reason Robert Klitgaard argues in this pathbreaking book is that the strategies don't take cultural diversity into account Gently but firmly he shows how and why

anthropology and cultural studies have not been effectively applied But it need not be so The Culture and Development Manifesto shows how to mobilize knowledge from and for the disadvantaged the indigenous and the voiceless Looking beyond interactions between cultural contexts and particular projects Klitgaard seeks new ways to think about goals new kinds of alternatives new and perhaps hybrid ways to implement or resist and as a result new kinds of politics In short this remarkable book fundamentally re envisions what development policy can be **The American Role in the Global Economy**

Susan J. Whitson, 1988 The Diversity of Emerging Capitalisms in Developing Countries Eric Rougier, François Combarnous, 2017-04-06 This book presents the results of a collective and original empirical investigation of the institutional systems underlying the capitalisms that are coming to the fore in developing nations While varieties of industrialized countries capitalisms are extensively scrutinized those of developing countries capitalisms are far less documented By implementing a unified and original comparative approach based on the institutional complementarity theory the different contributors of the book find evidence for the originality and heterogeneity of the forms of capitalism to be observed in developing countries This text analyses capitalist systems as clusters of sectoral institutions and regulations identifying differences between these clusters in a large sample of emerging and developing countries Rougier and Combarnous bring together contributions answering the following questions What are these clusters of institutions underlying emerging capitalisms Are there common or specific patterns of institutional clustering across countries and what are the main characteristics of the varieties of capitalism they shape What are their main long term determinants Are there specific patterns of economic outcome associated with these clusters Can different forms of institutional complementarity be observed How can we analyse institutional reform from this perspective Poor Numbers Morten Jerven, 2013-01-24 One of the most urgent challenges in African economic development is to devise a strategy for improving statistical capacity Reliable statistics including estimates of economic growth rates and per capita income are basic to the operation of governments in developing countries and vital to nongovernmental organizations and other entities that provide financial aid to them Rich countries and international financial institutions such as the World Bank allocate their development resources on the basis of such data The paucity of accurate statistics is not merely a technical problem it has a massive impact on the welfare of citizens in developing countries Where do these statistics originate How accurate are they Poor Numbers is the first analysis of the production and use of African economic development statistics Morten Jerven s research shows how the statistical capacities of sub Saharan African economies have fallen into disarray The numbers substantially misstate the actual state of affairs As a result scarce resources are misapplied Development policy does not deliver the benefits expected Policymakers attempts to improve the lot of the citizenry are frustrated Donors have no accurate sense of the impact of the aid they supply Jerven s findings from sub Saharan Africa have far reaching implications for aid and development policy As Jerven notes the current catchphrase in the development community is evidence based policy and scholars are applying increasingly

sophisticated econometric methods but no statistical techniques can substitute for partial and unreliable data

Rural Wage Employment in Developing Countries Carlos Oya, Nicola Pontara, 2015-05-22 There is a striking scarcity of work conducted on rural labour markets in the developing world particularly in Africa This book aims to fill this gap by bringing together a group of contributors who boast substantial field experience researching rural wage employment in various developing countries It provides critical perspectives on mainstream approaches to rural agrarian development and analysis of agrarian change and rural transformations from a long term perspective This book challenges the notion that rural areas in low and middle income countries are dominated by self employment It purports that this conventional view is largely due to the application of conceptual frameworks and statistical conventions that are ill equipped to capture labour market participation The contributions in this book offer a variety of methodological lessons for the study of rural labour markets focusing in particular on the use of mixed methods in micro level field research and more emphasis on capturing occupation multiplicity The emphasis on context history and specific configurations of power relations affecting rural labour market outcomes are key and reoccurring features of this book This analysis will help readers think about policy options to improve the quantity and quality of rural wage employment their impact on the poorest rural people and their political feasibility in each context
