Reference Manual on Scientific Evidence National Research Council, Federal Judicial Center, Policy and Global Affairs, Committee on Science, Technology, and Law, Committee on the Development of the Third Edition of the Reference Manual on Scientific Evidence, 2011-10-26 The Reference Manual on Scientific Evidence Third Edition assists judges in managing cases involving complex scientific and technical evidence by describing the basic tenets of key scientific fields from which legal evidence is typically derived and by providing examples of cases in which that evidence has been used First published in 1994 by the Federal Judicial Center the Reference Manual on Scientific Evidence has been relied upon in the legal and academic communities and is often cited by various courts and others Judges faced with disputes over the admissibility of scientific and technical evidence refer to the manual to help them better understand and evaluate the relevance reliability and usefulness of the evidence being proffered The manual is not intended to tell judges what is good

science and what is not. Instead it serves to help judges identify issues on which experts are likely to differ and to guide the inquiry of the court in seeking an informed resolution of the conflict. The core of the manual consists of a series of chapters, reference guides on various scientific topics, each authored by an expert in that field. The topics have been chosen by an oversight committee because of their complexity and frequency in litigation. Each chapter is intended to provide a general overview of the topic in lay terms, identifying issues that will be useful to judges and others in the legal profession. They are written for a non-technical audience and are not intended as exhaustive presentations of the topic. Rather, the chapters seek to provide judges with the basic information in an area of science to allow them to have an informed conversation with the experts and attorneys.

Cross-Cultural and Multicultural Psychology Christine Ma-Kellams, 2025-03-04. Cross Cultural and Multicultural Psychology: A Concise Introduction explores the specific ways one's cultural background shapes one's sense of self, emotions, motivation, judgments, relationships, and more. It discusses race, politics, God, sex, money, and how you like your coffee. In the process, this book unpacks culture in all its various forms, including but not limited to ethnic, socioeconomic, gender, and religious culture. It also covers what happens when cultures collide, e.g., diversity issues and multiculturalism, and presents insights into the future of culture. To this end, this book uses empirical psychological research on culture and applies it to real-world issues like whether money makes one happy or being online makes one unwell. It presents the mounting evidence suggesting that much of our psychological processes is culture-specific, theory-driven, and context-dependent. It includes chapters on the newest, most groundbreaking issues facing the study of culture, including how to unpack the origins of culture, where it comes from, how to test the history of culture in modern-day laboratory studies, how culture shapes the brain, and how the brain changes culture, and the question of cultural change in the era of globalization.

Growing Adaptive Machines Taras Kowaliw, Nicolas Bredeche, René Doursat, 2014-06-04. The pursuit of artificial intelligence has been a highly active domain of research for decades, yielding exciting scientific insights and productive new technologies. In terms of generating intelligence, however, this pursuit has yielded only limited success. This book explores the hypothesis that adaptive growth is a means of moving forward. By emulating the biological process of development, we can incorporate desirable characteristics of natural neural systems into engineered designs and thus move closer towards the creation of brain-like systems. The particular focus is on how to design artificial neural networks for engineering tasks. The book consists of contributions from 18 researchers, ranging from detailed reviews of recent domains by senior scientists to exciting new contributions representing the state of the art in machine learning research. The book begins with broad overviews of artificial neurogenesis and bio-inspired machine learning, suitable both as an introduction to the domains and as a reference for experts. Several contributions provide perspectives and future hypotheses on recent, highly successful trains of research, including deep learning, the Hyper-NEAT model of developmental neural network design, and a simulation of the visual cortex. Other contributions cover recent advances in the design of bio-inspired artificial neural networks, including the creation of

machines for classification the behavioural control of virtual agents the design of virtual multi component robots and morphologies and the creation of flexible intelligence Throughout the contributors share their vast expertise on the means and benefits of creating brain like machines This book is appropriate for advanced students and practitioners of artificial intelligence and machine learning *Reason and Emotion in International Ethics* Renée Jeffery, 2014-06-12 Renée Jeffery examines the role played by the emotions in making moral judgments and motivating ethical actions Focusing on the problem of world poverty she draws on the work of eighteenth century moral sentiment theorists and recent advances in the neurosciences to develop an original account of international ethics
