**A First Course in Complex Analysis** Allan R. Willms, 2022-04-20 This book introduces complex analysis and is appropriate

for a first course in the subject at typically the third year University level It introduces the exponential function very early but does so rigorously It covers the usual topics of functions differentiation analyticity contour integration the theorems of Cauchy and their many consequences Taylor and Laurent series residue theory the computation of certain improper real integrals and a brief introduction to conformal mapping Throughout the text an emphasis is placed on geometric properties of complex numbers and visualization of complex mappings

**The Calculus of Complex Functions** William Johnston, 2022-04-01 The book introduces complex analysis as a natural extension of the calculus of real valued functions The mechanism for doing so is the extension theorem which states that any real analytic function extends to an analytic function defined in a region of the complex plane The connection to real functions and calculus is then natural The introduction to analytic functions feels intuitive and their fundamental properties are covered quickly As a result the book allows a surprisingly large coverage of the classical analysis topics of analytic and meromorphic functions harmonic functions contour integrals and series representations conformal maps and the Dirichlet problem It also introduces several more advanced notions including the Riemann hypothesis and operator theory in a manner accessible to undergraduates The last chapter describes bounded linear operators on Hilbert and Banach spaces including the spectral theory of compact operators in a way that also provides an excellent review of important topics in linear algebra and provides a pathway to undergraduate research topics in analysis The book allows flexible use in a single semester full year or capstone course in complex analysis Prerequisites can range from only multivariate calculus to a transition course or to linear algebra or real analysis There are over one thousand exercises of a variety of types and levels Every chapter contains an essay describing a part of the history of the subject and at least one connected collection of exercises that together comprise a project level exploration
