

PROBABILITY PROBLEMS

SOLUTIONS

- 1 Probability can be recorded in words or using fractions, decimals or percentages.

a There is only one card showing a 6. $P(\text{the number 6}) = 1 \text{ in } 20$ $= \frac{1}{20}$ $= 0.05$ $= 5\%$	b There are 6 multiples of 3: {3, 6, 9, 12, 15, 18} $P(\text{multiple of 3}) = 6 \text{ in } 20 \text{ or } 3 \text{ in } 10$ $= \frac{6}{20} \text{ or } \frac{3}{10}$ $= 0.3$ $= 30\%$
c The prime numbers are: {2, 3, 5, 7, 11, 13, 17, 19} $P(\text{prime number}) = 8 \text{ in } 20 \text{ or } 2 \text{ in } 5$ $= \frac{8}{20} \text{ or } \frac{2}{5}$ $= 0.4$ $= 40\%$	d This is the complement of selecting a prime. Use the probability of selecting a prime number. The probabilities add to 1. $P(\text{not prime}) = 1 - P(\text{prime})$ $= \frac{3}{5}$ $= 0.6$ $= 60\%$

- 2 The favourable outcomes are {3, 13, 23, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 43}

$P(\text{at least one 3}) = 14 \text{ out of } 45$

$$\begin{aligned}
 &= \frac{14}{45} \\
 &= 0.3\bar{1} \quad (\text{Note the repeater sign meaning } 0.311111111111\dots) \\
 &= 31\frac{1}{9}\% \text{ or } 31.\bar{1}\%
 \end{aligned}$$

- 3 The three probabilities must add to 1.

$$\begin{aligned}
 \frac{1}{2} + \frac{1}{3} &= \frac{3}{6} + \frac{2}{6} \\
 &= \frac{5}{6}
 \end{aligned}$$

$$1 - \frac{5}{6} = \frac{1}{6}$$

$$P(\text{yellow}) = \frac{1}{6}$$

- 4 If there is a 75% chance of selecting a red beetle then there is a 25% chance of selecting a blue beetle.

75% = 24 red beetles

25% = 8 blue beetles

100% = 32 beetles

There are 32 beetles altogether.

Difficult Probability Problems And Solutions:

Statistics: Problems And Solution (Second Edition) Eryl E Bassett, J Mike Bremner, Byron Jones, Byron J T Morgan, P M North, Ian T Jolliffe, 2000-06-27 Originally published in 1986 this book consists of 100 problems in probability and statistics together with solutions and most importantly extensive notes on the solutions The level of sophistication of the problems is similar to that encountered in many introductory courses in probability and statistics At this level straightforward solutions to the problems are of limited value unless they contain informed discussion of the choice of technique used and possible alternatives The solutions in the book are therefore elaborated with extensive notes which add value to the solutions themselves The notes enable the reader to discover relationships between various statistical techniques and provide the confidence needed to tackle new problems *Challenging Mathematical Problems with Elementary Solutions* ? . ?

?????, Isaak Moiseevich I?Aglom, Basil Gordon, 1987-01-01 Volume II of a two part series this book features 74 problems from various branches of mathematics Topics include points and lines topology convex polygons theory of primes and other subjects Complete solutions **Challenging Mathematical Problems with Elementary Solutions** A. M. Yaglom, I. M. Complex Problem Solving Beyond the Psychometric Approach Wolfgang Schoppek, Joachim Funke, Magda Osman, Annette Kluge, 2018-09-28 Complex problem solving CPS and related topics such as dynamic decision making DDM and complex dynamic control CDC represent multifaceted psychological phenomena In abroad sense CPS encompasses learning decision making and acting in complex and dynamic situations Moreover solutions to problems that people face in such situations are often generated in teams or groups This adds another layer of complexity to the situation itself because of the emerging issues that arise from the social dynamics of group interactions This framing of CPS means that it is not a single construct that can be measured by using a particular type of CPS task e g minimal complex system tests which is a view taken by the psychometric community The proposed approach taken here is that because CPS is multifaceted multiple approaches need to be taken to fully capture and understand what it is and how the different cognitive processes associated with it complement each other Thus this Research Topic is aimed at showcasing the latest work in the fields of CPS as well as DDM and CDC that takes a holist approach to investigating and theorizing about these abilities The collection of articles encompasses conceptual approaches as well as experimental and correlational studies involving established or new tools to examine CPS DDM and CDC This work contributes to answering questions about what strategies and what general knowledge can be transferred from one type of complex and dynamic situation to another what learning conditions result in transferable knowledge and skills and how these features can be trained

Stochastic Optimization in Insurance Pablo Azcue, Nora Muler, 2014-06-19. The main purpose of the book is to show how a viscosity approach can be used to tackle control problems in insurance. The problems covered are the maximization of survival probability as well as the maximization of dividends in the classical collective risk model. The authors consider the possibility of controlling the risk process by reinsurance as well as by investments. They show that optimal value functions are characterized as either the unique or the smallest viscosity solution of the associated Hamilton-Jacobi-Bellman equation; they also study the structure of the optimal strategies and show how to find them. The viscosity approach was widely used in control problems related to mathematical finance but until quite recently it was not used to solve control problems related to actuarial mathematical science. This book is designed to familiarize the reader on how to use this approach. The intended audience is graduate students as well as researchers in this area.
