Machine Learning and Immersive Technologies for User-centered Digital Healthcare Innovation Federico Colecchia, Eleonora Ceccaldi, Daniele Giunchi, Fang Wang, Rui Qin, 2025-06-09 Emerging technologies such as machine learning and immersive technologies including virtual reality and augmented reality hold great

potential for driving disruptive healthcare innovation. However, the adoption of digital technology in healthcare, including use of data-driven tools in support of clinical decision making and patient-facing applications relying on consumer electronic devices, is often hindered by issues of user experience, trust, equitability, and fairness. There is increasing recognition of a need to facilitate further convergence between the development of emerging technologies and user-centered design research for healthcare with a view to achieving a positive impact on patients, care professionals, and the healthcare system. This article collection addresses current development trends relating to user-centered digital healthcare innovation based on machine learning and immersive technologies in order to identify opportunities associated with the deployment of new solutions in a range of environments including clinical, domestic, and educational settings and barriers to the adoption of technology by end users. A key aim is to identify opportunities for strengthening interdisciplinary collaboration as well as methods of lowering barriers and overcoming obstacles for the benefit of patients, care professionals, and the healthcare system. Examples of potential outcomes are effective design and use of solutions based on machine learning and immersive technologies to improve user experience, strategies to facilitate ethical development of digital technology for healthcare, and methods of encouraging adoption of advanced tools developed in line with principles of equitability and fairness. Articles should address issues of user-centered digital healthcare innovation driven by machine learning and immersive technologies. Submissions should ideally be positioned at the intersection of digital technology development with user-centered design, although contributions more technical in nature as well as user experience studies are also welcome. A non-exhaustive list of suitable topics and manuscript types is given below: Machine learning and/or immersive technologies including augmented reality and virtual reality for user-centered digital healthcare; Clinical decision support systems; Patient-facing applications; Tools for education and training of future medical professionals; Potential barriers to adoption of technology; Issues of user experience, trust, equitability, and fairness in digital healthcare; Reviews and contributions discussing the development of intuitive, accessible, and inclusive digital interfaces. All aspects of healthcare that are being or have the potential to be impacted by machine learning and immersive technologies.

Lightweight Digital Trust Architectures in the Internet of Medical Things (IoMT) Hassan, Ahdi, Bhattacharya, Pronaya, Tikadar, Subrata, Dutta, Pushan Kumar, Sagayam, Martin, 2024-05-17. In the field of healthcare technology, the Internet of Medical Things (IoMT) stands at the forefront of progress, revolutionizing patient care through advanced monitoring and treatment modalities. However, this digital transformation brings forth a new challenge: the vulnerability of sensitive medical data to cyber threats. *Lightweight Digital Trust Architectures in the Internet of Medical Things (IoMT)* examines ways to fortify IoMT against potential breaches through the exploration of these trust architectures. Delving deep into data privacy technologies, the book examines the implications of regulatory frameworks such as GDPR, HIPAA, and cybersecurity law. It assesses traditional security methods and considers innovative approaches offering insights into certificate generation, digital identification, and the optimization of network protocols for secure data transmission.

Lightweight Digital Trust Architectures in the Internet of Medical Things IoMT illuminates the path forward for IoMT security Its objectives are multi faceted from unraveling the intricacies of the health chain to dissecting the role of lightweight cryptographic key agreement mechanisms in safeguarding medical data The book grapples with the challenges and advantages of implementing compact cryptographic techniques in healthcare particularly within the decentralized framework of IoMT By exploring the potential of Federated Learning FL in bolstering privacy and improving healthcare outcomes the book aims to equip researchers healthcare professionals and IT experts with valuable knowledge Through real world case studies it endeavors to pave the way for a future where security and efficiency seamlessly integrate in IoMT
